Narratives

Disaster Damage:

Effect of Recent Flood-Related Disaster and Illinois' Recovery Needs

Heavy rains that fell across the Upper Mississippi River Basin in the summer of 2007 were responsible for the Federal Emergency Management Agency (FEMA) 1771-DR-IL disaster declaration. These same rains caused significant flooding in southeastern Minnesota, eastern Iowa, southern Wisconsin and northern Illinois. Large portions of northern Illinois received between 125 and 175 inches of rain during this period, and this, combined with the above-normal precipitation in the winter of 2007-2008, created a condition of almost permanent soil saturation through the spring of 2008. From March 1 to May 31, 2008, an additional 150-175 inches of precipitation fell across the Mississippi River Basin, adding to the already hazardous situation. With the permanent soil saturation from the previous periods of heavy precipitation the state was set for a major flooding event. The rains that were most immediately responsible for the major flooding seen in river systems across Illinois came in the first half of June 2008.

On June 1, 2008, with heavy rains still falling, rivers and streams in the eastern, northern and western sections of the state began to rise. On June 2nd, the Wabash River at Hutsonville, IL, reached flood stage at 16 feet. On June 3, 2008, the Mississippi River reached flood stage in several communities (Burlington, Hannibal, Saverton, Louisiana, and Clarksville) along its course. On June 4, 2008, four more communities along the Mississippi River (Gladstone, Gregory Landing, Canton, and Quincy) reached flood stage. In response to the rising waters, first responders in the affected areas immediately began life safety operations and on June 4th, the American Red Cross opened the first of seven shelters to provide temporary shelter to those who had been displaced by the flooding. On June 5, 2008, the Mississippi River at Alton reached flood stage at 21 feet. By June 7, 2008, the Embarras River at Ste. Marie and Lawrenceville as well as the Mississippi River at Keithsburg had reached flood stage. On June 8th and 9th, the Mississippi River at New Boston, the Wabash River at Mount Carmel, the Des Plaines River at Russell and the Rock River at Shirland all reached flood stage. On June 10, 2008, with the Mississippi, Embarras, Wabash, Des Plaines, and Rock rivers continuing to rise, the Governor of the State of Illinois Rod R. Blagojevich authorized the activation of the State of Illinois Emergency Operations plan. By that point, assets of various state agencies, including: Illinois State Police (ISP), Illinois Department of Transportation (IDOT), Illinois Department of Natural Resources (IDNR), Illinois Emergency Management Agency (IEMA) and the Illinois Department of Public Health (IDPH) were providing assistance in the affected areas.

During the period of June 10 through June 14, 2008, the Des Plaines River at Gurnee, the Rock River at Latham Park and Rockton, and the Mississippi River at various locations north of New Boston reached flood stage. On June 13, 2008, the Governor made a request for expedited a Federal Disaster Declaration for the affected counties in all regions of the state. From the middle to the end of June the waters continued to rise on the Embarras, Wabash, Des Plaines, Rock and Mississippi Rivers inundating homes, businesses and transportation corridors. As of June 27, 2008, heavy rains were continuing to inundate river basins that feed major waterways across the state of Illinois.

Recovery Needs:

Floods occur in very specific geographic spaces that most often cut across jurisdictional boundaries, state lines, and other human-generated subdivisions of reality. While river basins are recognized as important features in hydrographic and environmental research, they are rarely embraced as meaningful economic units. Accordingly, socio-economic data often have to be manipulated to "fit" the geographic "contours" of flooded areas, or a compromise adopted whereby aggregations of counties are considered. The issue becomes more difficult when the percentage of a county that is impacted by a flood is much larger or smaller than adjacent counties. Thus, aggregating counties into a "flooded region" for assessment can overlook important spatial variations within these regions. The issue, unfortunately, is endemic in any spatial analysis. At the state level, the problem is even more severe, and analysis conducted at this level may significantly overstate or understate the impacts that occur in specific counties.

As a result, it was difficult to integrate the precise physical demarcations of the flooded region presented in the WIU Reference Materials (Appendix A of the written action plan) with the analysis presented here.

Economic regions rarely map into physical regions. This is especially the case in rural counties where home-to-work trips are often extensive given the limited employment opportunities present in any one county. Hence, the economic analysis is presented at the level of the county, embracing the whole of the county for each of the counties that were affected by flooding.

While the state-wide impacts are presented in this report, they should be viewed as merely macroeconomic indicators of the magnitude of the problem generated by the 2008 flood. These results are not an attempt to minimize the magnitude of the impacts by moving to a very highly aggregated definition of space.

A second issue is that floods occur during different stages in the development of an economy and at different points in the business cycle. Further, long-term structural changes can exacerbate or mitigate the impacts of floods. In the last three decades, the state of Illinois, along with most of the Midwest, has experienced a dramatic structural change in the composition of the economy.

At the same time, the State's economic structure has changed to a point where the State's economy now looks much more like that for the United States as a whole than for many of its Midwestern neighbors. However, the State has not behaved like the Nation as a whole in an economic sense. For example, both Illinois and the United States recorded employment peaks in November 2000 prior to entering the 2000-2001 recession. While the United States recovered its prior peak by February 2005, Illinois was still more than two to three years away (at then current growth rates) from recovering its peak in June 2008. Employment was over 100,000 lower than in November 2000; further, when consideration is given to decreases in labor force participation rates (the percentage of the population over 16 in the labor force) and increases in the population of the state, a more realistic target to achieve the same population levels as November 2000 would be 150,000.

However, June 2008 marked the first of 12 consecutive months (and counting) of employment declines in Illinois. Since the beginning of the recession in December 2007, Illinois has posted negative job changes 17 times, and the state has lost 293,300 jobs in this recession. Of these losses, 254,100 jobs (86.6%) have been lost since September 2008. Hence, the June 2008 floods occurred during what has now been determined to be the most serious business cycle downturn since the 1930s, with Illinois now recording unemployment rates not seen in over a quarter of a century. Further, much of the stimulus from recovery is often directed to residential housing reconstruction, a sector of the economy that has disproportionately suffered in the current recession.

This economic context is important since any estimated job losses associated with the 2008 flood are likely to be dwarfed by the magnitude of the economic declines. To date, the economic recession has resulted in the loss of close to 307,600 jobs, of which 272,600 have occurred in the last 12 months. That said, it is still important to assess the economic impacts of the flood since while unexpected, in terms of time and less so in terms of space, the probability of another flood event in many of the same locations is very high. This probability is likely to increase if forecasted patterns of long-term climate change increase the incidence of major summer storms in the Midwest over the coming decades.

Progress Toward Activity Type Targets

Progress Toward National Objective Targets

Overall Progress Narrative:

Progress for the quarter was focused almost entirely on the Midwest Public Infrastructure/Public Assistance Program. After the start of the state's new fiscal year, the state had to re-open the grant approval system and the grant agreement process was started for all 25 public assistance related awards and for the remaining public infrastructure awards. Execution of all grant agreements are expected to be complete by November 2012. The environmental reviews were initiated for several of the public infrastructure activities and some of the public assistance activities. Technical assistance was provided to the communities to initiate implementing program policies and procedures in accordance with CDBG regulations. Additionally, technical assistance for the public assistance recipients was started, which includes on site visits to review and collect financial and other project records necessary for review prior to reimbursement. Funds for public assistance cannot be drawn or paid until all data is collected and verified and environmental review is complete. Disbursements are expected to begin prior to the end of the calendar year 2012. The only funds expended this quarter were for payment of the vendor's contract to administer and implement the Midwest Grant. The state completed project closeout and reporting for the property buyout program activities.

Project Summary

Activity Description:

Construction of a new storm water collection system on Washington St. from Madison Ave. south, approx. 1,200 feet, to the end of Washington St. and on Park St. from Prairie Ave. to Washington St. Street improvements will also be made to restore damage caused by storm water. Since the natural contour of the ground is so flat, a drainage channel will be excavated to provide an outlet for the storm sewer system.

Activity Description:

Funds directly related to implementing the Public Infrastructure Program

Location Description:

Activity Progress Narrative:

The grant agreement process was started for all 25 public assistance related awards and for the remaining public infrastructure awards. Execution of all grant agreements are expected to be complete by November 2012. The environmental reviews were initiated for several of the public infrastructure activities and some of the public assistance activities. Technical assistance was provided to the communities to initiate implementing program policies and procedures in accordance with CDBG regulations. Additionally, technical assistance for the public assistance recipients was started, which includes on site visits to review and collect financial and other project records necessary for review prior to reimbursement. Funds for public assistance cannot be drawn or paid until all data is collected and verified and environmental review is complete. Disbursements are expected to begin prior to the end of the calendar year 2012.

Activity Description:

This is the sample activity description from which a large amount of text might be copied and pasted to the html forms in DRGR. Ideally, this should copy instantly via the innerHTML, but it appears as if when we change the innerHTML, its not actually visible in the presentation. This is a test to see if it actually saves, even though it was not visible. Maybe doing a setfocus on the object after the text was changed might do the trick. Thank you.

Location Description:

The Disaster Recovery Grant Reporting system was developed by HUDs Office of Community Planning and Development for the Disaster Recovery CDBG program and other special appropriations. Data from the system is used by HUD staff to review activities funded under these programs and for required quarterly reports to Congress. The system was developed for grantees to identify activities funded under their Action Plans and Amendments along with budgets and performance goals for those activities. Once an Action Plan is submitted and approved, grantees can submit quarterly reports summarizing obligation, expenditures, drawdowns, and accomplishments for all their activities. The following links and resources are available for accessing the DRGR system:

Activity Progress Narrative:
