% persistent after 1 month	89%	87%	88%	
% persistent after 2 months	84%	81%	---	
% persistent after 3 months	80%	---	---	

NOTES:

Maximus system data based on November 11, 2016 data extract; EDW data based on November 10, 2016 extract.

Data covers fiscal year 2017 of IMRP, which started in July, 2016. Attribution to a month reflects the month in which a decision was made, not necessarily the month in which the decision was effective. Notes on individual sections follow:

I. Case level data from Maximus system

a. There are small fluctuations in determinations completed for previous months due to determinations completed retroactively.

II. Case level data from both Maximus system for those cases in which Maximus was involved (primarily cases without benefits in addition to Medicaid) and from EDW for those in which Maximus was not involved (cases with other benefits in addition to Medicaid). Lower cancellation rate for clients who have additional benefits (primarily SNAP) reflects the fact these clients return information more promptly because the loss of food support is much more immediate. Medicaid tends to be regarded as a benefit accessed when needed. (For the same reason, the more a client uses Medicaid, the more likely information will be returned promptly.)

III. Data is at individual level from EDW. Table shows that a significant number of clients return to the rolls, some of them fairly immediately when they present required information.
