August 30, 2004

The *2003 Statistical Presentation* is published by the Illinois Department of Corrections pursuant to Chapter 730, Illinois Compiled Statutes, 5/5-5-4.3. This document provides insights regarding the types of offenders sentenced to the Department. Most of the data summarize sentencing and length of stay trends over the last ten years to identify factors contributing to the expanding prison population.

At the end of calendar year 2003, the adult prison population was 38.2% over rated capacity, totaling 43,418 inmates in a correctional system with a rated capacity of 31,434. Another 33,702 offenders were on Mandatory Supervised Release (MSR). The prison population has grown from 36,543 in 1994, an increase of 18.8%.

To address the historical increase in the inmate population, the Department currently operates 27 adult correctional centers, eight Adult Transition Centers, seven work camps, two Impact Incarceration Program facilities, and 26 parole offices. The Department has developed management standards that will hold staff more accountable for supervision of inmates within correctional facilities and offenders released to the community.

Much of the prison population growth has been attributed to longer prison terms due to the enactment of stricter laws, many written to increase the penalties for drugs and weapons violations. In recent years, however, the Department has seen a greater proportion of inmates sentenced to prison with shorter sentences for lower class offenses. There also had been an increase in admissions for released inmates who committed a technical violation while on MSR. Lengths of stay for technical violations are relatively shorter than those for court admissions. Instead of incarcerating more long-term inmates, the Department had been going through a period in which inmates with shorter lengths of stay were advancing more rapidly through the prison system. Consequently, the inmate population did not accumulate at rates previously associated with longer sentences. However, the effects of the long-term sentencing enhancements enacted during the late 1990s are beginning to take effect, as seen by a 1.7% increase in the prison population during 2003.

Sincerely,

Roger E. Walker Jr.
Director

Appendix A . Illinois Sentencing Practices Comparison - Indeterminate and Determinate 119

Appendix B . Definitions and Data Interpretations 123

Foreword

The *2003 Statistical Presentation*, prepared by the Illinois Department of Corrections, is published in compliance with the Unified Code of Corrections, Chapter 730 Illinois Compiled Statutes (ILCS) 5/5-5-4.3. This report is intended to provide timely, reliable, and comprehensive information to legislators, judges and their staff, criminal justice experts, and the general public. The data can be used to evaluate sentencing practices and their impact on the Department of Corrections.

In accordance with statute, this document reports data in terms of time served, sentences imposed and admissions by offense and offense categories for the years 1994 through 2003, while periodically providing longer historical trends. Data are reported by frequency, central tendency (mean and median), and dispersion. Time served represents stay with the Department of Corrections plus additional credits for periods spent in custody for which the offender is entitled to credit against the sentence. Comparisons of inmates sentenced under determinate sentencing can be made to those incarcerated under indeterminate sentencing, which was abolished in 1978. Sentences less than the minimum or more than the maximum, as outlined in determinate sentencing statutes, are presented. Data for inmates incarcerated with a life or death sentence; as a Sexually Dangerous Person, Habitual Criminal, or Habitual Child Sex Offender; with a Truth in Sentencing offense; and those found guilty but mentally ill are highlighted.

Data reported in this document fully conform to State and federal laws and resolutions concerning the security, privacy, and confidentiality of the materials. Unusual cases are audited and reviewed, and detected errors are corrected before data are reported.

Appendix B, *Definitions and Data Interpretation*, should be used as a guide to understanding terms and concepts, measures of data, operational definitions, and historical changes in offense descriptions and statutes. This methodology section is provided to clarify definitions and explain data collection techniques, including an account of how projected release dates are calculated with the inclusion of good time credits and earned time awards, a description of indeterminate and determinate sentencing, and a history of the Truth in Sentencing statute. Generally, most questions regarding the contents contained in this document can be answered within this methodology section.

Acknowledgments

Preparation of this report was accomplished with the assistance of the Management Information Sysstems Unit, who maintain the automated offender records, and the Transfer Coordinator's Office, who keep Central Office manual files for the Illinois Department of Corrections. Jeff Whitfield and Jo Weller, User Support, provided their expertise in the process of accessing and resolving data discrepancies in the Offender Tracking System database. Additional thanks are extended to Mike Noga, Applications Development, for his efforts in supplying and verifying the automated data files.

Special acknowledgment goes to Record Office staff across the state who have resolved data discrepancies in the Offender Tracking System.

Introduction

This document is divided into three sections that outline the key elements of incarceration in the Illinois Department of Corrections. Data are reported by specific offense, offense class, offense type, sentence type, judicial circuit and district, and geographic region. In most cases, data from 1994 to 2003 are reported; however, many tables and charts present data from 1978, which was the first year of determinate sentencing. This document also provides an overview of the inmates in the prison population and inmates admitted under Truth in Sentencing guidelines.

Part I, *Impact on the Population*, discusses the important factors behind the changing Illinois prison population. Changes in the assaultive, drug offender, and female populations are examined. Statistics for life, death, and Sexually Dangerous Person sentences are also provided. Further, the evolving Habitual Criminal, Habitual Child Sex Offender, guilty but mentally ill, and Truth in Sentencing populations are featured.

Part II, *Length of Stay*, describes the volume and average time served for inmates released after serving determinate prison sentences. Data are separated by specific offense, offense class, and offense type. In addition, the rate of releasing inmates sentenced under indeterminate sentencing is explained. Finally, Impact Incarceration Program and recidivism data are also examined.

Part III, *Sentences Imposed*, highlights data regarding determinate and indeterminate sentencing patterns. Sentence data are also separated by specific offense, offense class, and offense type. The numbers of extended, shortened, and consecutive sentences are also made available by specific offense and class. Average sentences for the most common offenses are provided by judicial circuit and district, as well as geographic region. Lastly, prison admission data are reported for each year from 1994 through 2003, with breakdowns by offense class and offense type.

Part I: Impact on the Population

Part I: Impact on the Population

Summary

Part I presents sentencing and population data to demonstrate how sentencing practices and statutory revisions contribute to the growth of Illinois' prison population. At the end of 1977, the population was 10,982. The December 31, 2003 population reached 43,418, an annual growth rate of 5.4% since 1977.

This expansion in the number of inmates has been largely a consequence of the number and length of Murder, Class X, and Class 1 sentences imposed since determinate sentencing began in 1978. The volume of admissions for these mostly violent offenders, whose relatively longer sentences hold them in prison for an extensive period of time, results in an accumulation of inmates within the prison system. However, there was a slight reduction in the prison population between 2000 and 2002 that has been attributed, among other reasons, to a higher proportion of admissions for offenders sentenced from court for the lower classes of offenses as well as an increase in admissions for released inmates who committed a technical violation while on Mandatory Supervised Release. These offenders typically have short lengths of stay, resulting in a faster movement of inmates through the system, and consequently, the prison population had been lower than in previous years. However, as admission patterns changed, the prison population increased during 2003.

Those inmates with a life sentence, habitual child sex offenders and child sex offenders, and indeterminate inmates who remain incarcerated also contribute to the expansion in population. In addition, the sheer volume of drug offenders sentenced to prison each year, particularly for Possession of a Controlled Substance, continues to contribute to the overall growth in the prison population. Finally, offenders have been sentenced to prison under the Truth in Sentencing statute since 1998; at the end of 2003, 4,086 inmates sentenced under Truth in Sentencing were in the prison population.

Detailed impacts on the prison population as a result of recent sentencing practices in Illinois are explained in Part I.

Prison Population

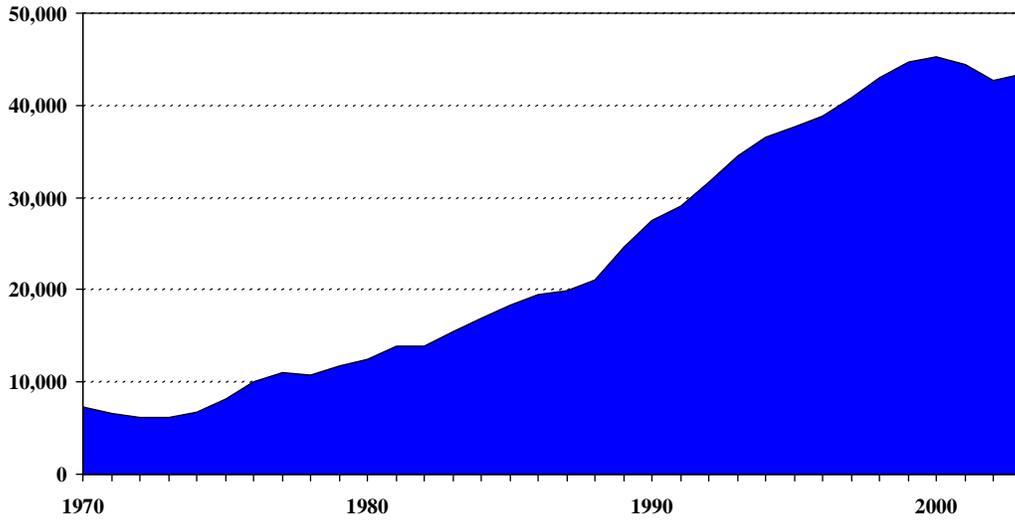

Table 1 and Figure 1 illustrate prison population growth since 1970. The acceleration that began in 1974 is attributed to more felons being sentenced to prison with longer sentences. The expansion in the prison population continued after 1978 with the enactment of determinate sentencing. Growth slowed in the early 1980's when the Illinois Department of Corrections (IDOC) utilized a forced release policy. A significant rise began again once forced release ended in 1983.

From 1988 to 1994 the prison population increased by 73.3%. Between 1994 and 2000 the prison population had an annual growth rate of 3.6%. Over the next two years, however, the population decreased by 2,588 inmates, a reduction of 5.7%. This decline was attributed, first of all, to an increase in the number of Class 4 admissions. During this time, a greater proportion of inmates had been sentenced to prison with shorter sentences for Class 4 as well as other lower class offenses. Secondly, there had been an increase in admissions for released inmates who committed a technical violation while on Mandatory Supervised Release. Lengths of stay for technical violations are relatively shorter than those for court admissions, so inmates do not accumulate in the population as they would with longer sentences. Consequently, instead of incarcerating more long-term inmates, IDOC had been going through a period in which inmates with shorter lengths of stay were advancing more rapidly through the prison system.

On the other hand, as the number of court admissions was increasing in 2002 and 2003 and the number of technical violations began dropping, the prison population increased by 725 inmates during 2003, a 1.7% increase.

Calendar Year	Population	Calendar Year	Population
1970	7,326	1987	19,850
1971	6,579	1988	21,081
1972	6,196	1989	24,712
1973	6,100	1990	27,516
1974	6,707	1991	29,115
1975	8,237	1992	31,640
1976	10,054	1993	34,495
1977	10,982	1994	36,543
1978	10,733	1995	37,658
1979	11,749	1996	38,852
1980	12,458	1997	40,788
1981	13,917	1998	43,051
1982	13,895	1999	44,660
1983	15,432	2000	45,281
1984	16,854	2001	44,348
1985	18,279	2002	42,693
1986	19,456	2003	43,418

Figure 1
Prison Population
1970 – 2003

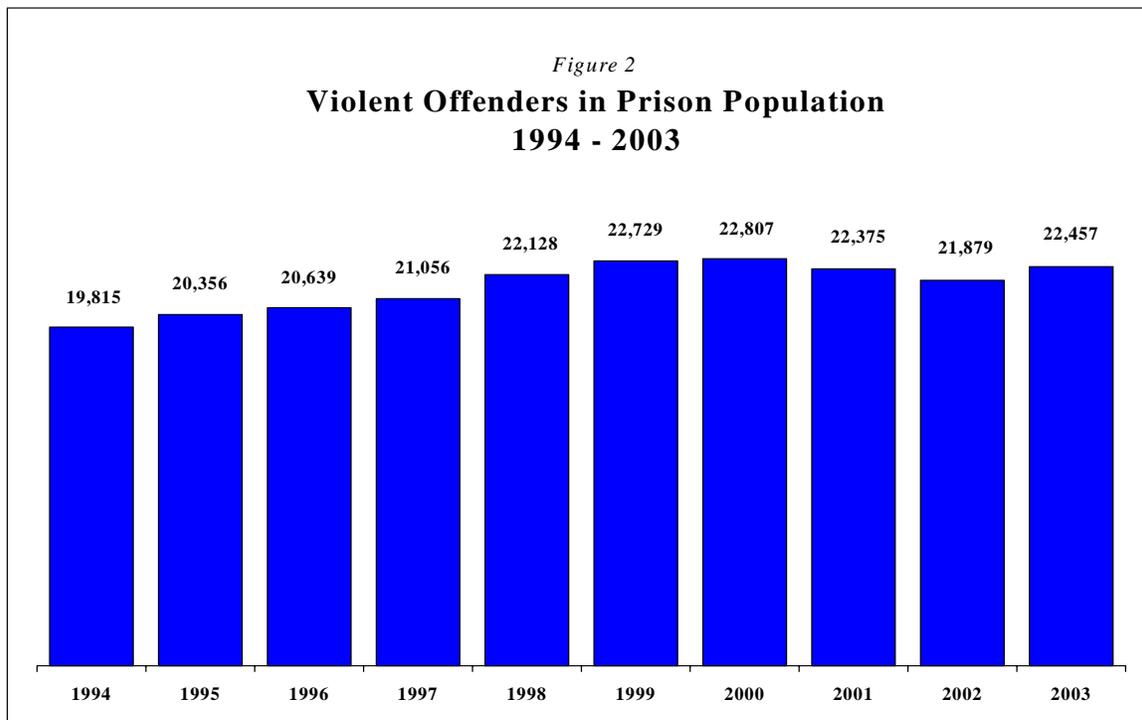

Violent Offenders, Drug Offenders, and Females in the Prison Population

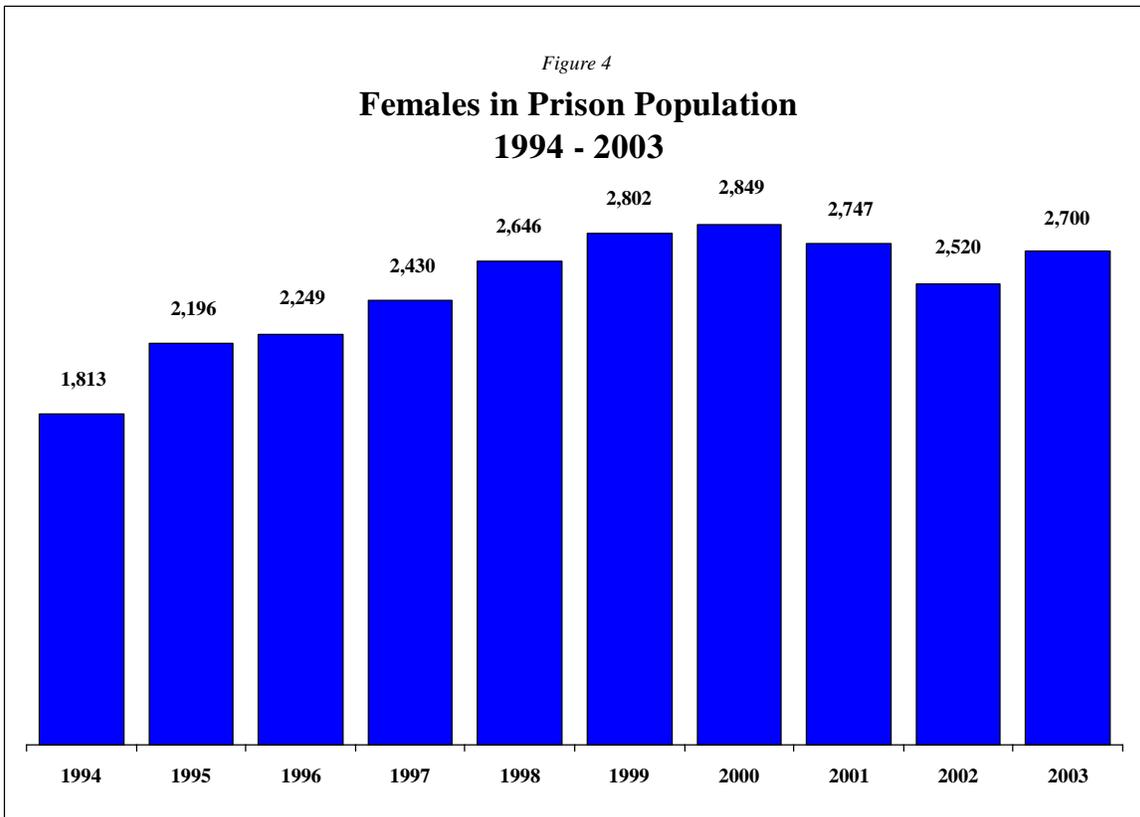

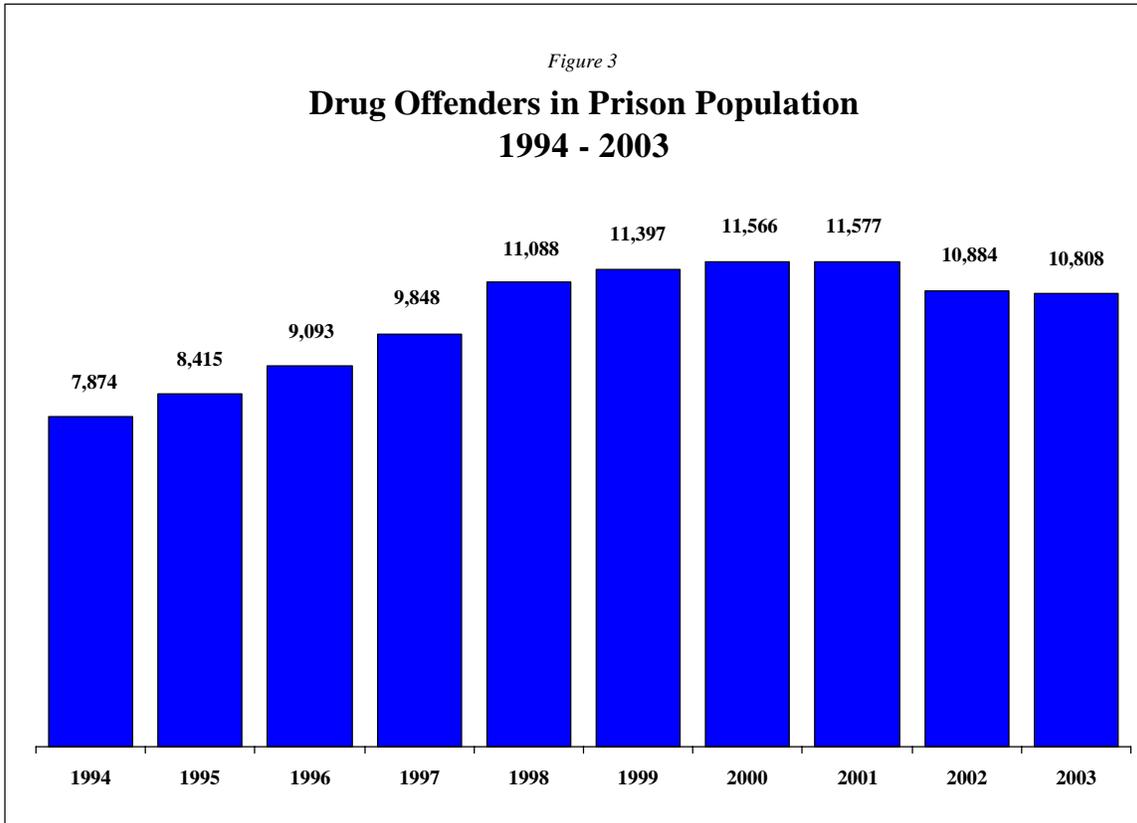

Many factors contribute to an increasing prison population. Inmates serving sentences for violent crimes remain incarcerated longer than those convicted of property or drug crimes. Between 1994 and 2000, there had been a gradual rise in the number of inmates sentenced for a violent crime (Figure 2). However, this number fell by 432 in 2001, then by another 496 in 2002; but by the end of 2003, the number of violent offenders in prison had increased by 578, a 2.6% rise.

The number of drug offenders in Illinois' prison system fell by 693 (-6.0%) during 2002, then by another 76 (-0.7%) in 2003 (Figure 3). Since 1994, however, this population has experienced an overall growth of 37.3%. The most significant increases during this ten-year period took place for Possession of a Controlled Substance and Delivery of Controlled Substances to a Person Under 18 or in Specified Places.

In addition, Driving while under the Influence of Alcohol, Other Drug, or Combination of Both (DUI) offenses are included in Figure 3. The number of inmates convicted of DUI-related offenses has risen over 500% during the past ten years, from a total of 75 inmates at the end of 1994 to 463 by the end of 2003. This is attributed to the enactment and use of such laws as Aggravated DUI and Driving while under the Influence of Alcohol or other Drugs during a period in which Driving Privileges were Revoked or Suspended.

Since 1994, the female population has accelerated at nearly three times the rate of the male population (Figure 4). At the end of 2003, there were 2,700 women in prison, an increase of 48.9% over this time period. Female inmates are housed at the Dwight Correctional Center, which includes the Kankakee Minimum Security Unit, at the Lincoln and Decatur Correctional Centers, and in the Dixon Springs Impact Incarceration Program (IIP). Female inmates also reside in the Fox Valley Adult Transition Center and the Women's Treatment Center in Chicago.

Impact of Determinate Sentencing

The overall growth in the number of violent offenders since 1977, many of whom have been convicted of Class X crimes, as well as in the number of drug offenders, has been a consequence of determinate sentencing (refer to Appendix B for an explanation of determinate sentencing). Determinate sentencing has resulted in an increase in the number of inmates in the prison population, as inmates convicted of violent crimes and the most serious drug offenses are incarcerated for longer periods of time than those under the indeterminate sentencing structure.

Table 2 demonstrates that the number of inmates incarcerated for the most serious crimes, which consist of Murder as well as Class X and Class 1 felonies, has increased by 21,512 since 1977 (the year prior to determinate sentencing). Proportionately, these habitually violent criminals and long-term drug offenders comprised less than 37% of the prison population in 1977. By the end of 2003, Murder, Class X, and Class 1 offenders represented 58.6% of all inmates.

Among the lower class offenses, the dominance of Class 2 offenders in the prison population is seen in Table 2. These property and drug offenders made up nearly 21% of the population. In addition, the increase in the use of incarceration for Class 4 offenders is noted by the growth of these offenders in the prison population from 1977 to 2003.

Table 2
Impact of Determinate Sentencing on Prison Population by Offense Class
1977 and 2003

<i>Offense Class</i>	<i>Total Inmate Population</i>			<i>Percent of Population</i>		
	<i>December 1977</i>	<i>December 2003</i>	<i>Change</i>	<i>December 1977</i>	<i>December 2003</i>	<i>Change</i>
Murder	689	7,346	+6,657	6.4%	16.9%	+10.5%
Class X	-----	10,769	+10,769	-----	24.8%	+24.8%
Class 1	3,223	7,309	+4,086	30.1%	16.8%	-13.3%

Misdemeanors	223	-----	-223	2.1%	-----	-2.1%
Pre-1973 Offenses	1,607	-----	-1,607	15.0%	-----	-15.0%
Unknown/Unclassified	225	142	-83	2.1%	0.3%	-1.8%
Total	10,717	43,418	32,701	100.0%	100.0%	0.0%

Note: Population includes technical violators of parole and Mandatory Supervised Release.

Prison Population by Offense Type

Offenses are categorized into groups consisting of crimes against a person, property crimes, drug offenses, sex crimes, and other miscellaneous crimes. Generally, crimes against a person and sex offenses are classified together as "violent crimes."

Table 3 and Figure 5 illustrate the increasing prison population within each of these five classifications over the past ten years. Since 1994, the number of offenders sentenced to prison for crimes against a person expanded by 1,895, an 11.3% increase. The number of sex offenders in prison has risen by 26.3%, while offenders with property crimes grew by 12.3%. The largest increase is in the number of drug offenders, which shot up by 36.9% during this time period.

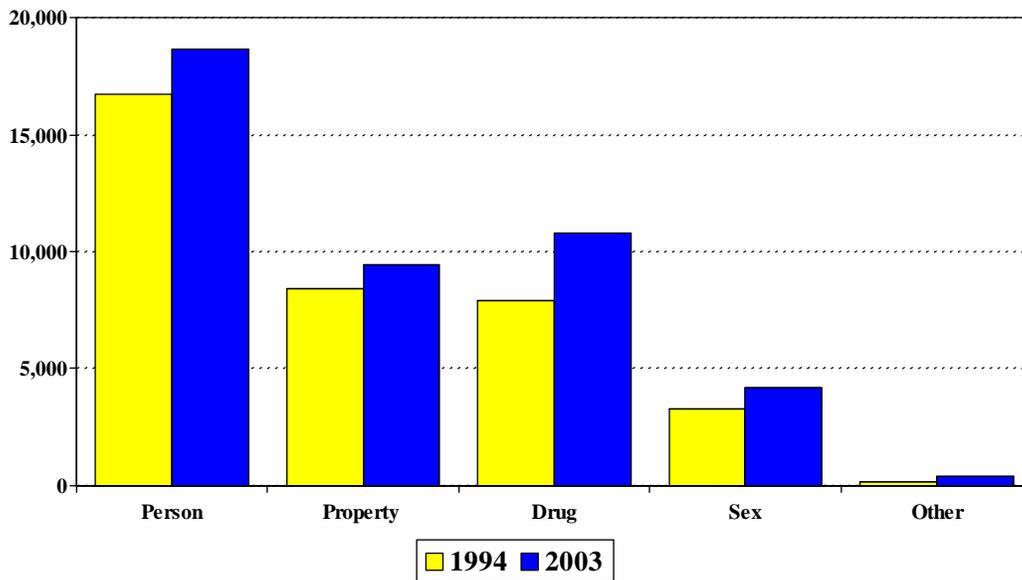

The majority of inmates in Illinois' prisons continue to be those convicted of violent crimes. The total number of inmates who were sentenced for a crime against a person or a sex offense comprised 52.5% of the prison population at the end of 2003. Additionally, these data indicate that nearly one of every four inmates is serving a holding sentence for a drug offense while more than one of every five inmates is serving a holding sentence for a property crime.

Table 3
Prison Population by Offense Type
 1994 and 2003

Offense Type	Total Inmate Population			Percent of Population		
	December 1994	December 2003	Change	December 1994	December 2003	Change
Person	16,730	18,625	+1,895	45.8%	42.9%	-2.9%
Property	8,419	9,454	+1,035	23.1%	21.8%	-1.3%
Drug	7,895	10,808	+2,913	21.6%	24.9%	+3.3%
Sex	3,292	4,157	+865	9.0%	9.6%	+0.6%
Other	195	374	+179	0.5%	0.8%	+0.3%
Total	36,531	43,418	6,887	100.0%	100.0%	0.0%

Note: Population includes technical violators of parole and Mandatory Supervised Release.

Figure 5
Prison Population by Offense Type
 1994 and 2003

Impact of Determinate Sentencing on Length of Stay

Serious offenders are also serving more time in prison. Since 1978, the average length of stay for an inmate convicted of Murder has risen by 3.2 years. Class X inmates released during 2003 served over 14 months longer than inmates released in 1978 with a comparable indeterminate sentence. Conversely, inmates released in 2003 for felonies in other offense classes served less time on average than those released during 1978.

Table 4
Impact of Determinate Sentencing on Length of Stay by Offense Class
Inmates Released in 1978 and 2003

<i>Offense Class</i>	<i>Length of Stay in Years</i>		<i>Impact of Determinate Sentencing on Length of Stay</i>
	<i>1978</i>	<i>2003</i>	
Murder	11.0	14.2	+3.2
Class X	4.1	5.3	+1.2
Class 1	3.5	2.3	-1.2
Class 2	2.7	1.8	-0.9
Class 3	2.6	1.0	-1.6
Class 4	2.3	0.8	-1.5

Note: Refer to Appendix B for an explanation of the length of stay calculations.

Time Served and Projected Time to Serve for Determinate Cases

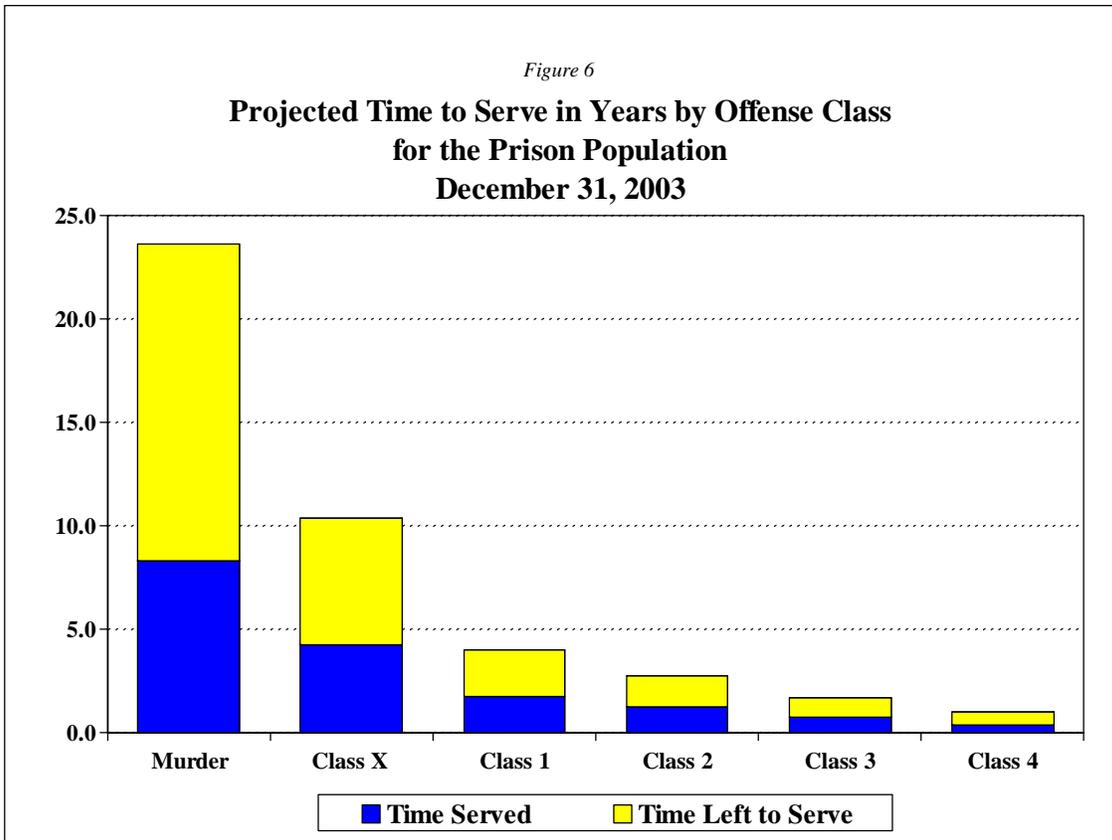

Inmates with a determinate sentence who are currently in prison, excluding the community supervision violators, have an average of 4.8 years left to serve after serving 3.1 years thus far. Of the 6,944 murderers, 5,849 do not have a life or death sentence and will be in prison for an average of 15.3 additional years. Furthermore, Class X offenders will be in prison for an average of 6.1 more years. The inmates serving prison sentences for the lower offense classes do not have as much time remaining on their sentences, with Class 3 and Class 4 inmates having an average of less than one year left to serve, as noted in Table 5 and Figure 6.

Accordingly, as more serious, long-term offenders are added to the prison population, with relatively fewer released, there will continue to be an accumulation of these inmates in prison.

Table 5
Time Served and Projected Time to Serve in Years for the Prison Population
Determinate Cases
December 31, 1994 and December 31, 2003

<i>1994</i>	<i>Inmates</i>	<i>Percent</i>	<i>Average Time Served in Prison</i>	<i>Average Time Left to Serve</i>	<i>Total Projected Time to be Served</i>

Note: Inmates admitted from court only. Technical violators of parole and Mandatory Supervised Release are excluded.

Sentences Imposed, Admissions, Exits, and Population by Offense Type

Data that support why violent offenders comprise the largest percentage of the population are presented in Table 6. Violent offenders constitute 24.0% of all sentences imposed and admissions, and 22.3% of all exits. Yet, as a consequence of their relatively longer lengths of stay, as evidenced by an average sentence (7.3 years) that is more than twice as long as those in the other offense categories, violent offenders are the most populous group (51.7%) in the prison system.

Conversely, property and drug offenders serve relatively less time in prison and, therefore, comprise a smaller proportion of inmates. Although about one-third of sentences imposed and just over 30% of admissions and exits are for property offenders, their shorter prison stays indicate that these inmates would not accumulate in the population. Despite the fact that property offenders constitute about three out of ten admissions and exits, they represent about two out of ten inmates in the prison population. Drug offenders have the highest percentages of sentences imposed (38.5%), admissions (41.5%), and releases (43.1%); but with their comparably brief time served, drug offenders represent just under one-fourth of the prison population.

<i>Offense Type</i>	<i>All Sentences Imposed</i>	<i>Admissions¹</i>	<i>Exits¹</i>	<i>Population</i>
Violent	24.0%	24.0%	22.3%	51.7%

¹Inmates admitted from court only. Technical violators of parole and Mandatory Supervised Release are excluded.

Time Served for Indeterminate Inmates

Most inmates are incarcerated with a determinate sentence, in which a predetermined release date is calculated. Inmates who committed an offense prior to 1978 have been incarcerated with an indeterminate sentence. These inmates are sentenced within a minimum and maximum range and are released following a decision made by the Prisoner Review Board or the Governor, or at the expiration of their sentence (see Appendix B). Table 7 illustrates the changes in this population from 1994 to 2003.

On December 31, 2003 there were 336 inmates in prison who were serving an indeterminate sentence. Nearly 85% of these inmates were incarcerated for Murder and another 9.5% were convicted of a Class X offense. Another 17 (5.1%) inmates were incarcerated with Class 1 offenses, and two inmates had Class 2 felonies. These inmates had served an average of over 26 years. Few indeterminate inmates are released each year, and due to the seriousness of their crimes, most of them will stay in prison for several years.

Inmates with a Sentence of Life, Death, or Sexually Dangerous Person

On January 11, 2003 outgoing Illinois Governor George Ryan commuted the sentences of all of the state's 160 death row inmates. Inmates who had been convicted but not yet sentenced or who had been remanded for a new trial were not included in the commutations. Four death row inmates were pardoned on January 10; three were released after being pardoned while the other inmate remained in prison because he had been convicted of a separate crime. Sentences for three additional inmates were reduced to 40 years to life in order to bring their sentences in line with co-defendants. All of the remaining 153 inmates had their sentences changed to life sentences without parole.

Even with the shift in sentences for this group of inmates, the number of inmates who will never be released continued to grow, with 1,462 incarcerated with a life sentence, death sentence or Sexually Dangerous Person (SDP) commitment on December 31, 2003. There were two inmates admitted to prison with a sentence of death, and there was a net increase of 186 inmates with a life sentence, reaching 1,321 at the end of the year. The number of SDPs increased to 139 during 2003; SDPs can only be released by court order.

The average age of these 1,462 inmates (41.7 years) is more than eight years older than the average age of other inmates in prison. Of the three groups of inmates, SDPs are the oldest, averaging 45.3 years of age. Inmates with life sentences are four years younger on average than SDPs.

Guilty But Mentally Ill Inmates

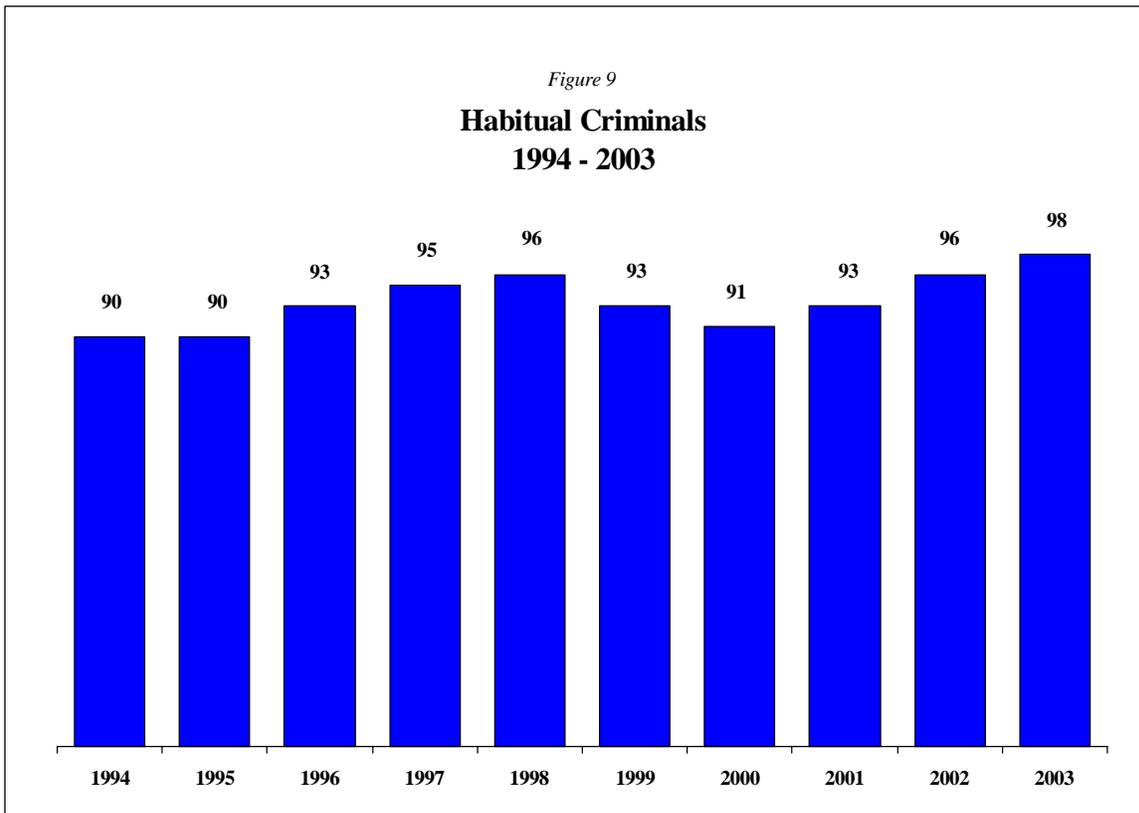

It states in 720 ILCS 5/6-2(c) that a "person who, at the time of the commission of a criminal offense, was not insane but was suffering from a mental illness, is not relieved of criminal responsibility for his conduct and may be found guilty but mentally ill." Guilty but mentally ill inmates are incarcerated with IDOC.

The number of guilty but mentally ill inmates in the prison population at the end of December 2003 (144) decreased by three from one year earlier. This decline, the second in two years, resulted from 18 releases of inmates who had been found guilty but mentally ill, with only 15 admissions during 2003. The end of 2003 population is the lowest in the last ten years.

Habitual Criminals

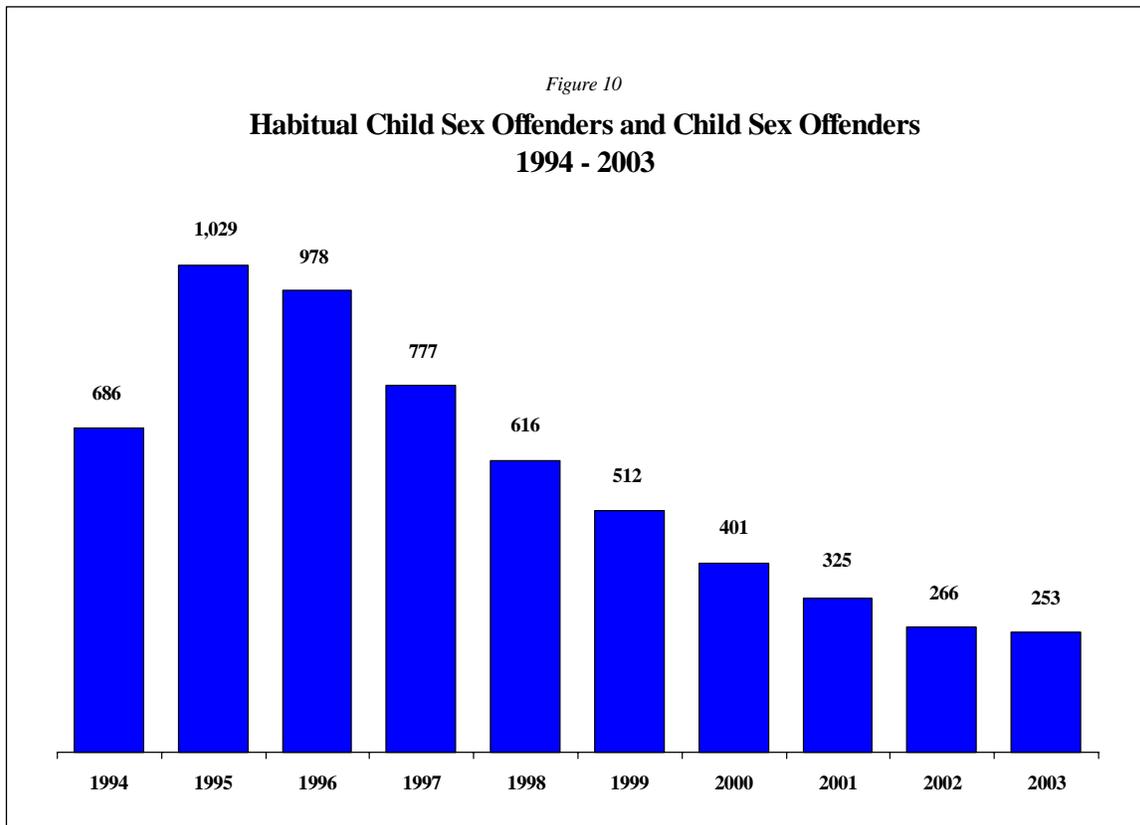

The number of offenders with a natural life sentence imposed under the Habitual Criminal statute (720 ILCS 5/33B-1) increased to 98 inmates during 2003, its highest level in the past ten years. Habitual offenders have committed Class X crimes in separate instances on three occasions, whereupon commission of the third Class X offense the court must adjudge the offender as an habitual criminal.

Habitual Child Sex Offenders

The total number of habitual child sex offenders and child sex offenders in prison has been decreasing since 1995. This population grew after the Habitual Child Sex Offender Registration Act became effective in August 1986, reaching 1,029 in the prison population at the end of 1995. This Act stipulated that a person could be certified as a child sex offender only upon his or her second or subsequent conviction of a sex crime against a victim less than 18 years of age. However, the Child Sex Offender Registration Act, enacted in January 1993, required that these offenders be designated a Child Sex Offender (CSO) on the first offense. As a result, the number of child sex offenders in prison jumped from 99 in 1992 to 1,029 in 1995.

However, the volume of these child sex offenders in the prison population began to fall during 1996. The decline in the number of CSOs in the prison population is attributed to the fact that, since 1995, States Attorneys have been providing better victim data, and, consequently, Record Office staff are able to identify only those inmates who meet the criteria under the Child Sex Offender Registration Act. The number of child sex offenders in the prison population fell to 253 during 2003 from 266 at the end of 2002. This represents the smallest annual reduction since the decline began in 1996.

Truth in Sentencing

In August 1995, Truth in Sentencing legislation was enacted (730 ILCS 5/3-6-3(a)(2)) under Public Act 89-404. However, this law was declared unconstitutional by the Illinois Supreme Court on January 22, 1999. Anticipating this decision, Public Act 90-593 became effective on June 19, 1998, reenacting the original Truth in Sentencing provisions.

According to this statute, offenders who commit First Degree Murder or the offense of terrorism must serve 100% of the sentence imposed by the court. A second provision lists twelve serious violent offenses that require inmates to serve 85% of their sentences. A third category of five violent offenses where the enumerated offense resulted in great bodily harm to a victim also requires inmates to serve 85% of their sentences. In three additional categories, i.e., where the circumstances of Reckless Homicide while under the Influence of Alcohol or any Other Drugs, Aggravated Battery or Aggravated Discharge of a Machine Gun or a Firearm Equipped with a Device used for Silencing the Report of a Firearm, and Aggravated Arson, inmates may be required to serve 85% of their sentences. The Truth in Sentencing provisions are described in Appendix B.

Beginning in late 1998, IDOC began to admit offenders sentenced under this new legislation. The end-of-year 2003 prison population included 4,086 inmates sentenced under the Truth in Sentencing statute. Of these inmates, 1,009 committed First Degree Murder and will serve 100% of their sentences. The majority of inmates sentenced under Truth in Sentencing have been sentenced under the mandatory 85% statute, with 2,708 inmates having been sentenced. Most of the inmates sentenced under this section of the statute were admitted for sexually assaultive offenses (Class X Predatory Criminal Sexual Assault of a Child, Class X Aggravated Criminal Sexual Assault, and Class 1 Criminal Sexual Assault). Attempted Murder and aggravated battery offenses were also prevalent.

Another 193 inmates committed an offense for which the sentencing judge determined that great bodily harm was inflicted upon the victim. Most of these were the Class X offenses of Home Invasion and Armed Robbery. These inmates are also required to serve 85% of their sentences. In addition, 157 inmates committed Reckless Homicide and 19 inmates committed Aggravated Arson for which the sentencing judge determined that the circumstances warranted the inmates serve 85% of their sentences.

The majority of inmates admitted to prison under Truth in Sentencing have been admitted since 2000. A total of 720 inmates were admitted during 2000, another 945 in 2001, 1,033 in 2002, and 1,135 during 2003. Only 135 Truth in Sentencing cases were released during 2003, most for Class 1 Criminal Sexual Assault and Class 2 Reckless Homicide. Consequently, the population impact of Public Act 90-593 will not be felt until there are a sufficient number of cases available for Truth in Sentencing inmates whose time served can be compared to those who served the customary determinate sentence. A more comprehensive analysis will be conducted in future reports as more offenders are released under this Truth in Sentencing statute.

Table 9
Time Served and Time Left to Serve in Years for the Truth in Sentencing Prison Population

Aggravated Arson	19	100.0%	0.9	5.7
Total Population	4,086		2.1	14.7

Part II: Length of Stay

PART II: Length of Stay

Summary

Inmates convicted of Murder and Class X offenses, particularly for crimes against a person and sex offenses, have served the longest periods of incarceration. However, as more offenders are being released from prison with Class 4 offenses recently, with fewer releases for inmates with Class X and Class 1 felonies, average time served has been decreasing.

Over the last ten years, the awarding of supplemental meritorious good time (SMGT), educational good conduct credits, and other earned time credits has contributed greatly to reducing length of incarceration, especially in the past few years. For the most part, inmates qualified for these types of good conduct credit have been convicted of the lower Class 2, Class 3, and Class 4 non-violent offenses. There has also been a substantial increase in the number of admissions for Possession of a Controlled Substance and other Class 4 offenses in recent years; with a relatively short prison stay (4.5 months), the number of exits will escalate each year as well.

Additionally, time served was reduced for 1,157 inmates who graduated from the two Impact Incarceration Program (IIP) facilities during 2003. On average, their time served is nearly six months shorter than similar inmates who do not go through the boot camp program.

The recidivism rate for inmates who exited prison in 2000 was 54.4%. Recidivism is defined as the rate at which inmates return to prison within three years of release.

Specific length of stay highlights are described in Part II.

Length of Stay in Years for Inmates Released

Length of stay is measured in two ways. Prison stay accounts for the time an inmate is in IDOC, from the date admitted to IDOC until the date of release. Total time served includes prison stay plus credit for time spent in jail, in a juvenile facility, in another state or federal jurisdiction, on probation and periodic imprisonment, etc.

It is important to understand that length of stay data are determined from inmates who exit prison and the data should be interpreted carefully. A majority of the exits, particularly cases with serious offenses, generally reflect those offenders who received the shortest sentences. Relatively few released inmates have served long periods of time; these cases have a minimal impact on the mean lengths of stay presented in this report. Therefore, average length of stay data may understate the anticipated time served for all inmates sentenced to prison (see Appendix B).

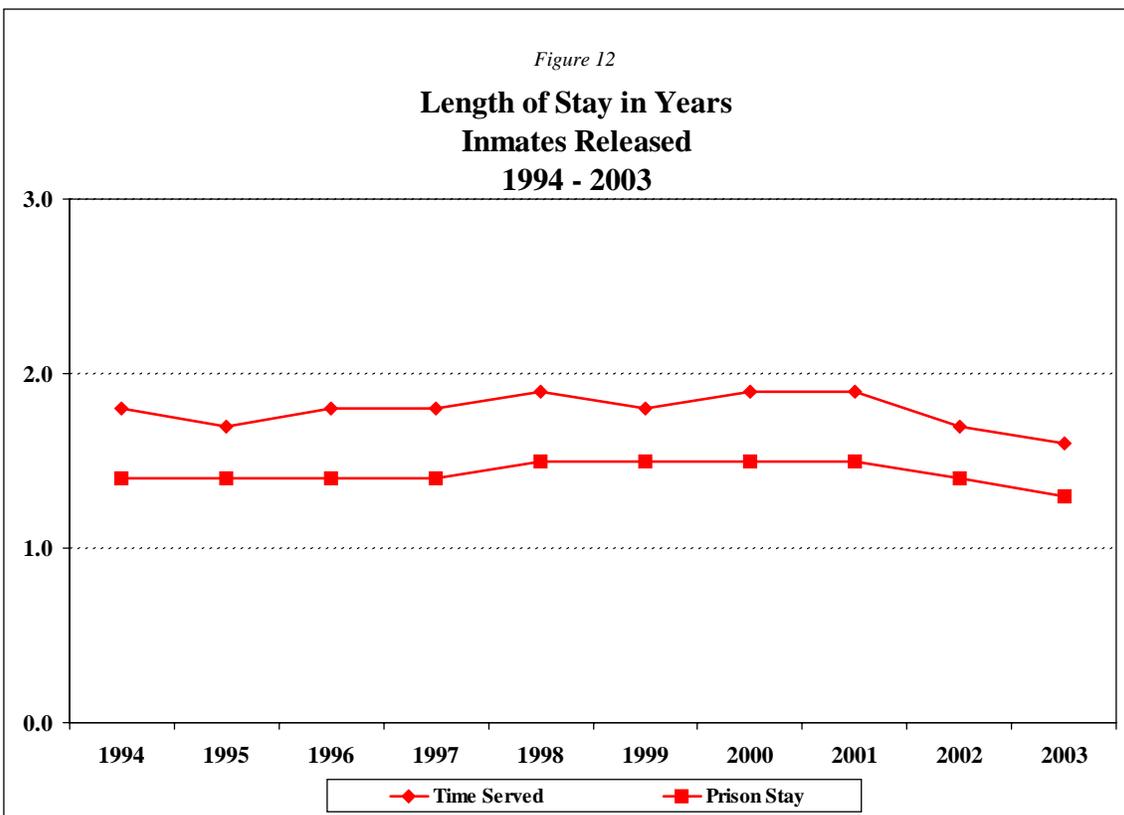

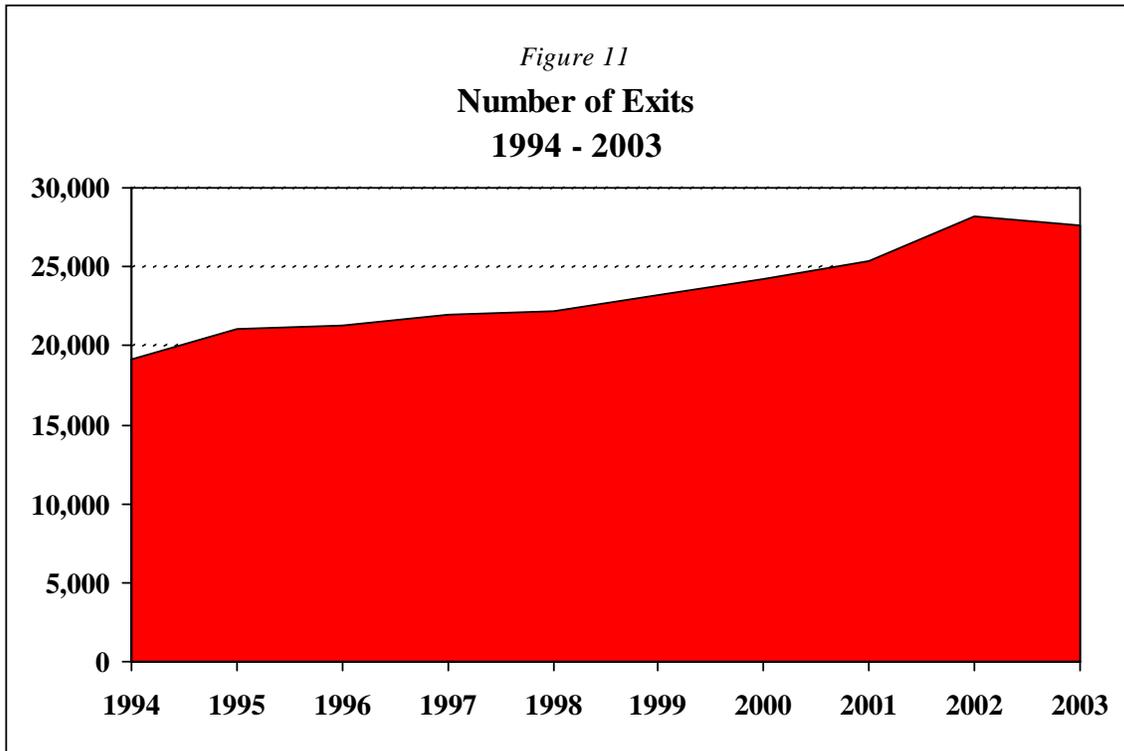

After an unprecedented 11.6% increase in the volume of prison exits from 2001 to 2002, exits fell 2.2% during 2003 (Table 10 and Figure 11). The overall growth in the amount of exits since 1994, a trend that actually began before 1989, has been a result of increases in prison admissions for Class 4 offenses with 1 to 3-year sentences, and more recent increases in good time awards.

The average total time served (1.6 years) and the average prison stay (1.3 years) fell slightly in 2003 for the second year in a row after remaining relatively consistent over the past eight years (Figure 12). Lengths of stay continue to be lower that they were prior to 1990; this decline has been associated with the awarding of SMGT, educational good conduct credits, and earned time, as well as shorter stays for an increasing number of lower class drug offenders.

Table 10
Length of Stay in Years for Inmates
Released 1994 - 2003

Year	Cases	Time Served				Prison Stay			
		Mean	Median	Minimum	Maximum	Mean	Median	Minimum	Maximum
1994	19,187	1.8	1.2	.04	31.6	1.4	0.9	.00	24.9
1995	21,052	1.7	1.2	.04	31.9	1.4	0.8	.00	31.7

1997	22,015	1.8	1.1	.00	29.3	1.4	0.8	.00	27.4
1998	22,181	1.9	1.2	.07	34.1	1.5	0.9	.00	33.6
1999	23,225	1.8	1.2	.02	33.0	1.5	0.9	.00	31.4
2000	24,171	1.9	1.2	.01	36.1	1.5	0.9	.00	35.9
2001	25,304	1.9	1.2	.02	36.9	1.5	0.8	.00	34.5
2002	28,229	1.7	1.0	.00	47.0	1.4	0.6	.00	46.8
2003	27,615	1.6	1.0	.15	33.1	1.3	0.6	.00	33.0

Note: Data include unclassified cases that are not reported in Tables 11, 12, and 15.

Length of Stay in Years by Offense Class for Inmates Released

Table 11 provides the number of exits, time served, and prison stay by offense class for inmates released from 1994 through 2003. Over this ten-year period, the number of exits rose for every offense class except Class X, which saw a significant decline (-17.9%) during 2003. The highest increase was for Class 4 offenses (199.3%), while Murder (77.0%) and Class 3 (31.5%) offenses also showed increases of note. The number of exits for Class X offenses has fallen 28.5% since 1994. As in recent years, over 78% of the total exits for 2003 consisted of Class 2, Class 3, or Class 4 offenders.

Average time served remained the same as in 2002 for all classes of offense except Murder. Average time served for inmates released for Murder during 2003 were an average of 0.4 years longer than the 2002 average; average prison stay for inmates released in 2003 for Murder were an average of 0.3 years longer. Except in 2000, total time served for Murder has increased or stayed the same each year since 1996. Among the other classes, only prison stay for Class X offenses showed a decrease from 2002.

The total average time served (1.6 years) continues to be driven by the higher proportion of inmates with these lower class offenses being released from prison. The average total time served for the more serious Murder, Class X, and Class 1 offenders was 3.9 years in 2003, while the average for the lower class offenders was 1.0 year.

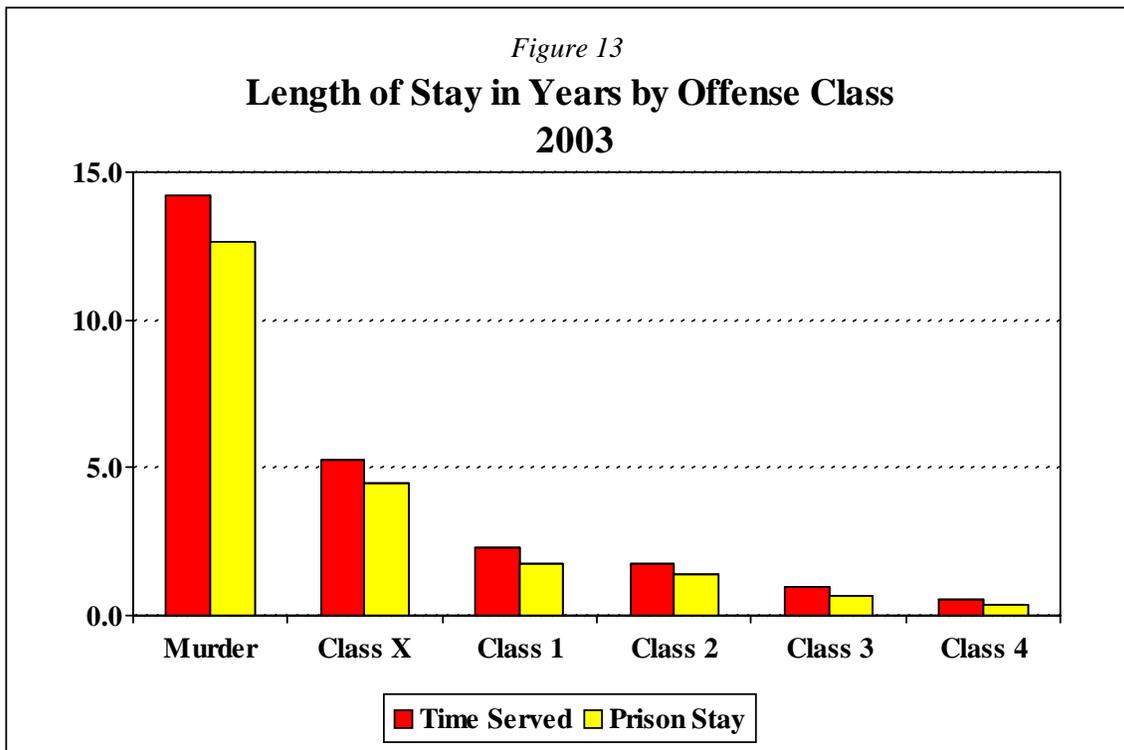

Table 11
Length of Stay in Years by Offense Class
Inmates Released 1994 - 2003

Offense Class	Year	Cases	Time Served			Prison Stay		
			Mean	Standard Deviation	Median	Mean	Standard Deviation	Median

Length of Stay in Years by Offense Type for Inmates Released

Table 12 shows that, following increases in the number of exits for person, sex and property crimes over the past few years, the number of exits among each of these offense types declined in 2003. The highest decreases in the number of exits from 2002 to 2003 were for crimes against a person (-8.3%) and sex crimes (-6.4%). The number of exits for drug crimes, however, continued to increase. Exits for drug crimes rose 1.6%, a relatively small annual increase given that the number of exits has grown 79.1% since 1994.

Average time served decreased in 2003 within three of the four main offense categories. Decreases in total time served took place for sex and property crimes while decreases in prison stay occurred for person and sex crimes.

From 1994 through 2000, time served had been longest for inmates convicted of sex crimes. Average time served and prison stay have increased for crimes against a person and decreased for sex crimes over the past ten years to the point where lengths of stay for person crimes exceeded those for sex crimes during 2002 and 2003. This has occurred due to recent increases in the number of exits for Class 4 offenses of Prostitution and Violation of the Sex Offender Registration Act and decreases for Class X aggravated Criminal Sexual Assault. Property and drug offenders served less than half as long as offenders sentenced for violent crimes.

The number of exits for other crimes, particularly for Obstructing Justice, also decreased during 2003 (-8.2%). In spite of this, increases were seen in the number of exits for Transporting Anhydrous Ammonia and some escape-related offenses. These exits, however, have risen by 114.2% over the past ten years. Average times served for other crimes were lowest in 2002 and 2003 than throughout the past ten years.

Length of Stay in Years for Determinate Cases

Dates of release from prison are determined from the type of sentence for which inmates have been incarcerated (see Appendix B). Determinate sentences are fixed lengths designated from a range set by statute. Indeterminate sentences have a minimum and maximum range established by the sentencing judge, and inmates are released after a decision by the Prisoner Review Board. Some inmates who were given an indeterminate sentence opted to choose a sentence with a set release date when the determinate sentencing structure was implemented in 1978.

After an 11.6% increase in the number of prison exits for determinate sentences from 2001 to 2002, these exits fell 2.1% during 2003 (Table 13). The average total time served (1.6 years) and the average prison stay (1.2 years) fell in 2003 for the second year in a row after remaining relatively consistent since 1994. Again, the reasons for these changes have been associated with increases in prison admissions for Class 4 offenses with 1 to 3-year sentences, and more recent increases in good time awards.

Table 13
Length of Stay in Years for Determinate Cases
Released 1994 - 2003

Year	Cases	Time Served				Prison Stay			
		Mean	Median	Minimum	Maximum	Mean	Median	Minimum	Maximum
1994	19,163	1.7	1.2	0.0	16.8	1.4	0.9	.00	16.5
1995	21,025	1.7	1.2	0.0	19.4	1.4	0.8	.00	17.3
1996	21,247	1.8	1.2	0.0	22.1	1.4	0.9	.00	17.3
1997	21,974	1.8	1.1	0.0	27.0	1.4	0.8	.00	19.2
1998	22,144	1.8	1.2	0.1	20.4	1.5	0.9	.00	19.9
1999	23,193	1.8	1.2	0.0	21.3	1.4	0.9	.00	20.8
2000	24,147	1.8	1.2	0.0	22.3	1.5	0.9	.00	21.4
2001	25,267	1.9	1.2	0.0	22.8	1.5	0.8	.00	21.9
2002	28,197	1.7	1.0	0.0	24.7	1.3	0.6	.00	24.2
2003	27,598	1.6	1.0	0.2	25.6	1.2	0.6	.00	24.7

Note: There may be some cases with maximum lengths of stay that would have inmates admitted to prison before determinate sentencing took effect in 1978. These inmates were originally sentenced under an indeterminate sentence, but opted for a set release date. The number of cases includes unclassified cases that are not reported in Tables 11, 12, and 15.

Length of Stay in Years for Indeterminate Cases

There were 17 exits during 2003 for inmates with an indeterminate sentence, the lowest annual total to date. These inmates were released after a decision by the Prisoner Review Board. Time served for these 17 averaged 28.0 years, serving between 25.8 years and 33.1 years.

Table 14
Length of Stay in Years for Indeterminate Cases
Released 1994 - 2003

Year	Cases	Time Served				Prison Stay			
		Mean	Median	Minimum	Maximum	Mean	Median	Minimum	Maximum
1994	24	18.9	18.6	0.7	31.6	16.6	17.2	0.6	24.9

2001	37	24.4	24.9	4.5	36.9	21.8	23.5	4.3	34.5
2002	32	27.4	26.1	14.8	47.0	26.5	25.3	13.0	46.8
2003	17	28.0	27.6	25.8	33.1	26.6	26.2	22.9	33.0

Length of Stay in Years by Selected Offenses for Determinate Cases

Table 15 provides data for inmates released from prison after serving a determinate sentence.

The number of exits for Murder and First Degree Murder increased by 4.2%, with 13 more releases than in 2002. After witnessing a decrease in 2002, both the average total time served and prison stay increased by one year in 2003, reaching their highest levels over the last ten years.

Decreases in the number of prison releases were discovered for some of the more serious offenses that are outlined in Table 15.

Despite increases in previous years, there were significant decreases in the number of prison exits from 2002 to 2003 for the Class X offenses of Attempted Murder/First Degree Murder (-42.5%), Aggravated Criminal Sexual Assault (-25.7%), Manufacture or Delivery of a Controlled Substance (-8.2%) and Armed Robbery (-7.4%). Decreases also took place for Other Class X offenses (-21.0%), which include Delivery of Controlled Substances to a Person under 18 or in Specified Places, Home Invasion, Aggravated Vehicular Hijacking, Armed Violence, and Aggravated Battery with a Firearm.

Times served for some Class X offenses continued to rise during 2003. The average time served and prison stay for Attempted Murder and Attempted First Degree Murder increased by nearly one year for the second year in a row. Total time served and prison stay for Aggravated Criminal Sexual Assault rose by more than one year in 2003. Average stays fell slightly for Armed Robbery and remained consistent with 2002 averages for Manufacture or Delivery of a Controlled Substance and Other Class X offenses.

Note that inmates sentenced for First Degree Murder and Class X felonies are not eligible for the IIP or earned good conduct credit, while inmates convicted of selected Class X offenses are ineligible for SMGT; thus, any changes in their lengths of stay would not be affected by these programs.

Declines in the number of prison exits during 2003 were seen for all categories of Class 1 offenses, including Delivery of Controlled Substances to a Person under 18 or in Specified Places (-16.5%), Residential Burglary (-8.9%) and Manufacture or Delivery of a Controlled Substance (-6.9%). Decreases also took place for Other Class 1 offenses (-5.7%), which include Aggravated Discharge of a Firearm, Second Degree Murder, Vehicular Hijacking, and Attempted Armed Robbery. Exits increased for some Class 1 offenses, including Aggravated Robbery, Manufacture or Delivery of Cannabis, and Vehicular Invasion.

The average length of stay for Class 1 Manufacture or Delivery of a Controlled Substance decreased in 2003, while average times served remained consistent with 2002 figures for the two other Class 1 offenses presented in Table 15. Both total time served and prison stay fell for the Other Class 1 offenses.

Decreases in the number of prison releases were discovered for some of the lower class offenses that are outlined in Table 15 as well.

Declines in the number of prison exits during 2003 were seen for all categories of Class 2 offenses, including Motor Vehicle Theft (-8.2%), Burglary (-6.0%), Robbery (-5.5%) and Manufacture or Delivery of a Controlled Substance (-3.1%), and Aggravated Criminal Sexual Abuse (-2.4%). On the other hand, the volume of exits for Other Class 2 offenses rose by 10.3% in 2003. Notable increases were seen for Driving while under the Influence/Driving with a Revoked or Suspended License, Aggravated Unlawful Use of a Weapon/Aggravated Unlawful Use of a Weapon by a Felon, Theft, and Aggravated Domestic Battery. Decreases took place for Arson, Delivery of Controlled Substances to a Person under 18 or in Specified Places, and Attempted Residential Burglary.

The pattern of decreasing exits continued for the Class 3 offenses of Aggravated Battery (-12.0%), Retail Theft (-4.8%), Theft (-3.3%), and Forgery (-2.6%). The number of exits for Unlawful Use of a Weapon/Unlawful Use of a Weapon by a Felon increased by 13.6% during 2003 after six consecutive years of decreasing numbers. Exits for other Class 3 offenses fell by 7.2% in 2003 following increases over the past two years. Exits declined for Attempted Burglary, Manufacture or Delivery of a Look-Alike Substance, and Manufacture or Delivery of a Controlled Substance. Noteworthy increases were seen for Driving while under the Influence/ Driving with a Revoked or Suspended License and Possession of a Counterfeit Credit Card.

Some Class 4 offenses did experience an increase in the volume of exits during 2003. Exits rose for Prostitution (15.9%), Retail Theft (12.7%), Possession of a Controlled Substance (7.3%), and Driving while under the Influence/Driving with a Revoked or Suspended License (6.2%). However, decreases took place for Domestic Battery (-20.0%), Theft (-14.1%), and Obstructing Justice (-9.8%). The number of releases for Other Class 4 offenses rose only minimally from 2002 to 2003. The increase in the volume of exits for Other Class 4 felonies, which consist mostly of drug and property offenses, has grown 283.6% over the past ten years. This increase is attributed to the passage of legislation for many Class 4 offenses, including Violation of the Sex Offender Registration Act, Aggravated Unlawful Use of a Weapon, and Transporting Anhydrous Ammonia but it also reflects the increased use of such Class 4 felonies as Criminal Damage to Property, Violation of an Order of Protection, Aggravated Fleeing of the Police, and Mob Action.

¹ There may be some maximum lengths of stay that would have inmates admitted to prison before determinate sentencing took effect in 1978. These inmates were originally sentenced under an indeterminate sentence, but opted for a set release date.

Length of Stay in Years for Indeterminate Cases by Selected Offenses

Of the 17 indeterminate releases during 2003, 12 were for inmates convicted of Murder. Three of the indeterminate cases were Class X offenders and two inmates had been incarcerated for a Class 1 felony. The majority of inmates who remain in prison with an indeterminate sentence are incarcerated for Murder and Class X offenses (see Table 7). Review Tables 15 and 16 to compare the various lengths of stay by offense for inmates released over the past ten years for determinate versus indeterminate sentences.

Length of Stay for Most Frequent 25 Offenses

Table 17 displays the 25 most frequently occurring offenses for inmates who exited during 2003, listing the average total time served and prison stay for each offense. Possession of a Controlled Substance (Class 4), with 5,942 exits, remained as the most frequent holding offense for inmates released in 2003. Burglary (Class 2) ranked as the second most frequent offense with 1,717 exits, with Class 2 Manufacture or Delivery of a Controlled Substance ranked a close third with 1,654 exits. Class 3 and Class 4 Retail Theft had a nearly identical number of exits in 2003. Class 1 Manufacture or Delivery of a Controlled Substance also had over 1,000 exits. Drug and property crimes were the most prevalent offenses for inmates exiting prison during 2003, although weapons offenses, robberies, and murder were included in the top 25 offenses, concluding with Class 4 Domestic Battery. These 25 offenses made up 79.0% of all exits in 2003.

¹ Unlawful Use of a Weapon (UUW) and Unlawful Use of a Weapon by a Felon were aggregated. Both offenses are Class 3 felonies and have similar time served and prison stay averages.

Note: The 25 offenses for which inmates were released most frequently total 21,821 and comprise 79.0% of all exits in 2003.

Length of Stay for Impact Incarceration Program Graduates and Comparison Group

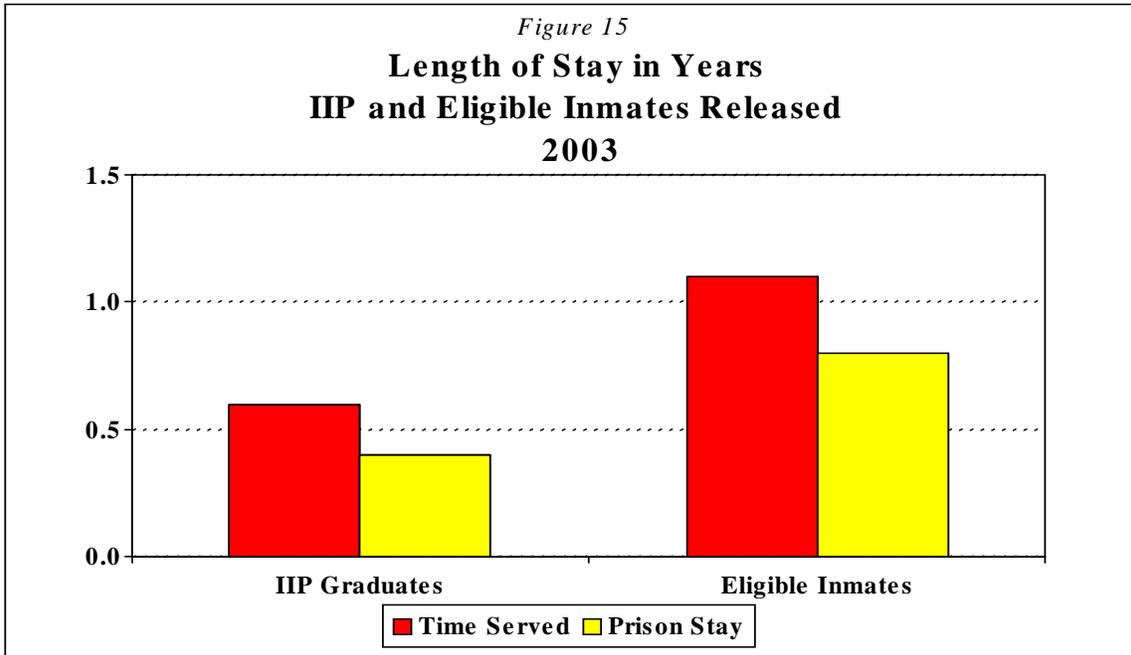

During 2003, 1,157 inmates graduated from the two Impact Incarceration Program (IIP) facilities (the Greene County IIP closed in September 2002). The average time served for IIP graduates was 7.7 months. They served 5.0 months in IDOC, which includes time spent at a Reception and Classification Center, at a holding facility awaiting intake into the IIP, and the four-month stay in the boot camp program. The remaining time was served prior to admission to IDOC.

These lengths of stay were compared to those for inmates who met statutory eligibility criteria for the IIP, but were not recommended, were denied participation by IDOC, or refused to participate. These cohorts, totaling 11,708 inmates released from traditional prisons during 2003, spent 1.1 years incarcerated, nearly twice as long as the IIP graduates.

Table 18
Length of Stay in Years
Impact Incarceration Program Graduates v. Eligible Inmates
Released from Traditional Prison in 2003¹

	Cases	Time Served			Prison Stay		
		Mean	Standard Deviation	Median	Mean	Standard Deviation	Median

IIP Eligible Exits	11,708	1.1	0.9	0.9	0.8	0.8	0.5

¹ Inmates exiting prison in 2003 who met statutory eligibility criteria (17-35 years old, 8 year sentence or less, first or second adult felony incarceration, and not convicted of selected offenses), but did not participate in the Impact Incarceration Program.

Recidivism Rates

Inmates who exit prison are tracked to determine how many return to prison within three years of their release date. These recidivists consist of releasees convicted of a new crime or returned for a technical violation of their Parole or Mandatory Supervised Release Agreement. For inmates released during fiscal year 2000, 54.4% returned to prison within three years.

Table 19 shows that over three-fifths of inmates released after being convicted of both property crimes (60.1%) and Class 2 (62.7%) felonies were back in prison within three years. Excluding those who had committed the other types of crimes (with 53.3% later returned to prison), recidivism rates were lowest for offenders who committed a crime against a person, many of whom had been sentenced for Murder and Class X offenses. Over half of the inmates committed from Cook County, as well as those from the downstate counties, were returned to prison; inmates sentenced from the collar counties were the least likely to return to prison.

Historically, younger releasees have had higher recidivism rates, with the percentage returning to prison declining as age increased. For fiscal year 2000 exits, however, released inmates aged 26 to 35 had higher return rates than those 21 to 25. This pattern was seen for the released inmates who were returned for a new felony sentence. Rates for released inmates returned for a technical violation did, in fact, fall steadily as age increased. Male releasees returned to prison at a higher rate than females. African-American inmates returned to prison most often, while Hispanic inmates had the lowest recidivism rates.

Of the 27,671 exits in fiscal year 2000, 7,846 (28.4%) were returned to prison after being sentenced with a new felony. The remaining 26.0% were returned for a technical violation, i.e., being AWOL from Mandatory Supervised Release, getting a misdemeanor conviction, or having a felony charge pending disposition at the time of readmission. Nearly 87% of the returns to prison occurred within two years after release, mainly due to a relatively high number of returns for technical violations.

Imposed
and
Admissions**

PART III: Sentences Imposed and Admissions

Summary

The total number of sentences declined by 14 cases from 2002 to 2003, but sentences within the ranges of determinate sentencing rose by 0.8%. The most significant increases were for Driving while under the Influence/Driving with a Suspended License (Class 4), Predatory Criminal Sexual Assault of a Child (Class X), Attempted Murder/ Attempted First Degree Murder (Class X), Retail Theft (Class 4), Possession of a Controlled Substance (Class 1), Aggravated Criminal Sexual Abuse (Class 2), Possession of a Controlled Substance (Class 4), and Prostitution (Class 4). The number of Murder/First Degree Murder sentences fell again during 2003, with no increases seen since 1998. Other decreases in the number of prison sentences handed down in 2003 were primarily for Delivery of Controlled Substances to a Person Under 18 or in Specified Places (Class 1), Aggravated Criminal Sexual Assault (Class X), Residential Burglary (Class 1), Theft (Class 4), Manufacture or Delivery of a Controlled Substance (Class 2), Burglary (Class 2), Motor Vehicle Theft (Class 2), and Domestic Battery (Class 4).

The largest volume of sentences was, once again, for Class 4 Possession of a Controlled Substance. One of every five sentences was imposed for this offense. Furthermore, the total number of Class 4 sentences imposed increased by another 7.9% in 2003.

The overall average sentence length fell for the fifth straight year. Over 60% of all prison sentences handed down during 2003 were three years or less. The longest sentences were for crimes against a person and sex offenses. One indeterminate sentence was given during 2003.

Sentences less than the statutory minimum were used in 1.7% of the sentences imposed during 2003. Most of these shortened sentences were for Class 1, Class 2, and Class 3 drug and property offenses. Extended terms were used in 5.0% of the sentences, mainly for Class 2, Class 3, and Class 4 felonies that involved heinous or aggravating circumstances.

Additionally, each year the majority of sentences imposed among the offense classes are handed down in the judicial circuit and district represented by Cook County. The widest disparities were found among the Murder, higher class violent crime, and lower class drug sentences. Conversely, the downstate region was responsible for sentencing the majority of lower class offenders for longer periods of time for certain property and driving-related offenses. During 2003, the Central Judicial District imposed some of the longest prison sentences within the state.

The total number of inmates admitted to prison rose by 60.3% from 1994 to 2003, with recent increases being shaped by a high volume of released inmates being returned for a technical violation. However, the average sentence lengths for court admissions have been steadily declining since 1994. The number of admissions for Murder, Class X, and Class 2 holding offenses have declined from 1994 through 2003, while the other felony offense classes saw an increase in the number of admissions over the past ten years. The numbers of admissions have risen while average sentences have fallen steadily since 1994 in all offense categories.

Detailed sentencing patterns and prison admission data are presented in Part III.

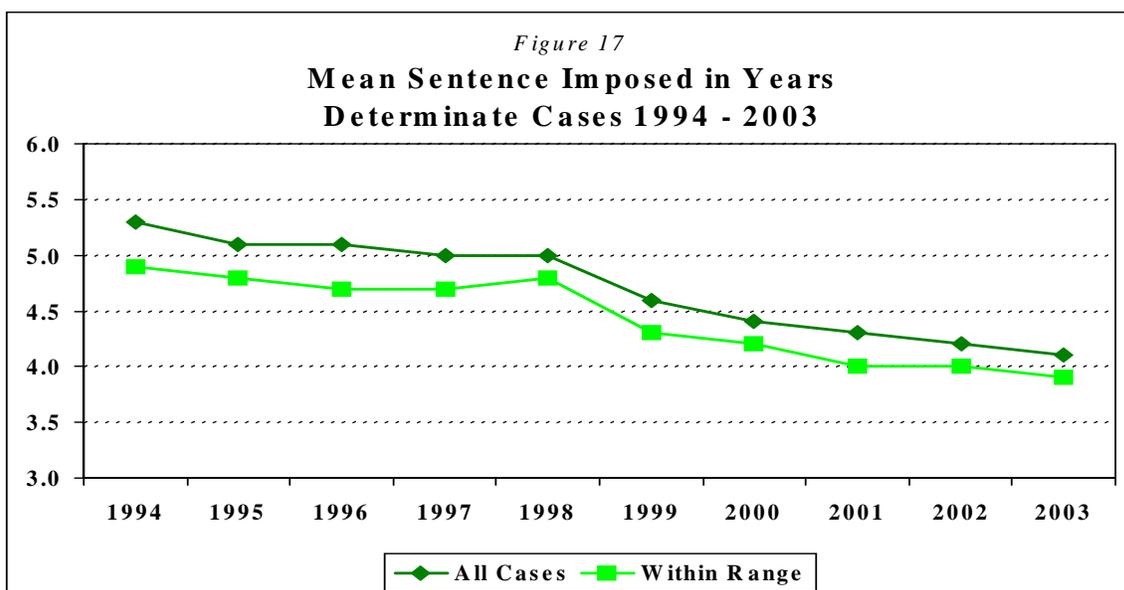

Average Determinate Sentences Imposed

The total number of sentences declined by 14 cases from 2002 to 2003, but sentences within the ranges of determinate sentencing rose by 292 cases, only a 0.8% increase. The average sentence lengths continued to decrease, with the average for all cases dropping for the fifth year in a row. When including shortened and extended sentence lengths (see Table 27), determinate sentences averaged 4.1 years in 2003, reflecting a steady decline over the past nine years. The average sentence for those cases within statutory ranges fell to below four years in 2003. The 3.0-year median indicates that at least one-half of prison sentences imposed were three years or less.

The number of life sentences dropped to 58 cases in 2003. There were only three death sentences imposed during 2003. There were seven Sexually Dangerous Person (SDP) sentences handed down in 2003. Only a few indeterminate sentences have been imposed each year for crimes committed before February 1978; there was one indeterminate sentence imposed in 2003.

Table 20

2003	39,538	4.1	3.0	36,876	3.9	3.0	58	3	7	1	39,607

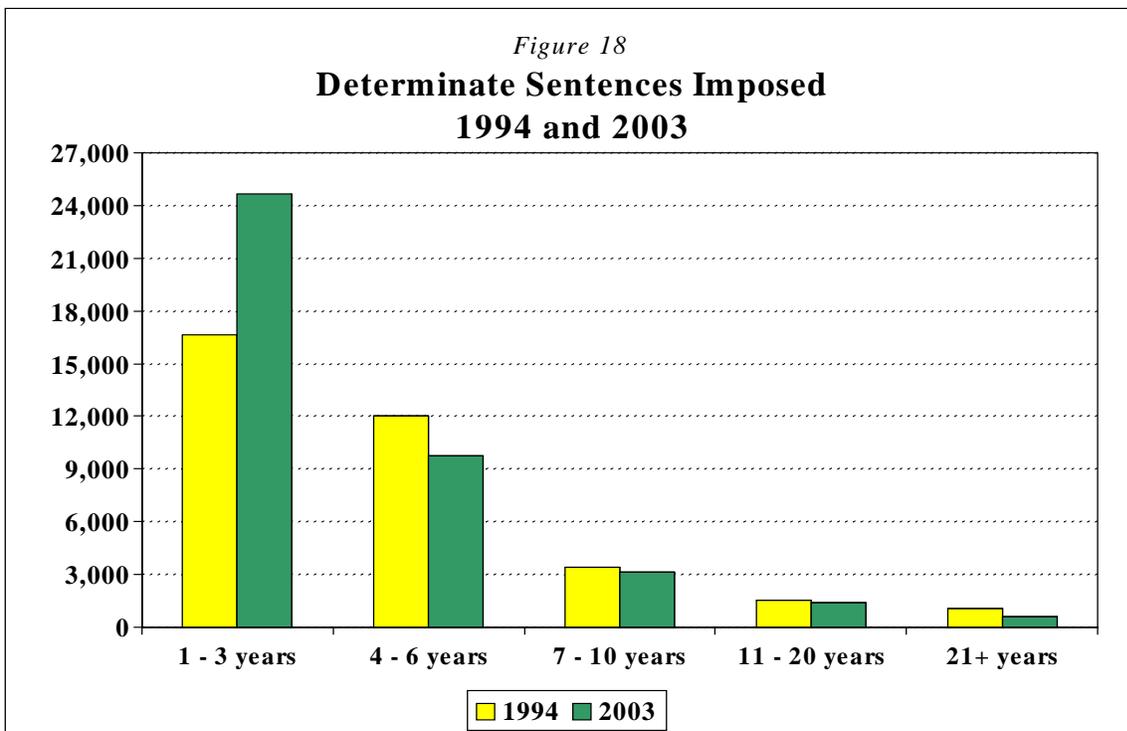

Distribution of Determinate Sentences Imposed

The decline of average lengths of stay is illustrated by the continued increases in the percentage of 1- to 3-year sentences imposed. The 24,680 1-3 year sentences handed down during 2003, representing 62.4% of all sentences, were at the highest levels throughout the last decade. Nearly one-third of these sentences (31.3%) were for Class 4 Possession of a Controlled Substance.

The number and percent of 4- to 6-year and 7- to 10-year sentences decreased in 2003. The number of 11- to 20-year sentences went up for the second year in a row, but the number of sentences greater than 20 years fell to merely 570 cases after a one year increase in 2002.

Table 21
Distribution of Determinate Sentences Imposed
1994 - 2003

Average Sentence Imposed by Offense Class

During 2003, there were 308 Murder sentences imposed that were within the statutory sentencing range, a 43.2% decline since 1998. There was a slight increase in the number of Class X sentences imposed, growing by nearly three percent during 2003. The number of Class 1, Class 2 and Class 3 sentences fell in 2003; the largest decreases were for Class 1 (-9.1%) and Class 2 (-5.4%) felonies. The number of Class 4 sentences has been steadily rising over the last several years (up 109.4% since 1994), and rose another 7.9% in 2003.

During the past decade, mean and median sentence lengths for Murder have undergone considerable fluctuation; mean sentences declined by 0.4% in 2003, following a 1.8-year increase during 2002 and a 1.9-year reduction in 2001. The averages over the past two years have begun to be comparable to sentence lengths seen before Truth in Sentencing. Average sentences for Class X felonies have been dropping in recent years, remaining at their lowest points during the last ten years. Mean sentences for Class 1 offenses jumped by 0.2 years in 2003, reaching 6.1 years after five straight years below six years. There have been relatively few changes in the mean and median sentence lengths for Class 2, Class 3, and Class 4 felonies since 1994.

Sentences Imposed and Average Sentence Imposed by Offense Class

Figure 19 shows how the volume of sentences imposed has changed between 1994 and 2003. The only increases took place for Class 3 (4.4%) and Class 4 offenses (109.4%); many of the Class 4 sentences resulted from convictions for drug crimes. Numbers of sentences imposed since 1994 declined for the more serious offenses, with the most significant decreases occurring for Class X (-28.4%), Murder (-24.9%) and Class 2 (-20.0%) offenses.

Since 1994, average sentences have remained relatively stable among the offense classes. When comparing 2003 average sentences to those imposed in 1994, sentences are slightly higher for the more serious Murder/First Degree Murder and Class 1 felonies and lower for the Class X felonies, and relatively equivalent for the lower Class 2, Class 3 and Class 4 offenses.

Average Sentence Imposed by Offense Type

Figure 21 displays and Table 23 lists sentence imposed data by offense type. Most crime types rose slightly during 2003. After some declines, the volume of sentences for crimes against a person has risen over the past two years, increasing by 2.5% in 2003 after an 18.9% jump in 2002. The number of sentences for sex crimes rose by another 4.8% in 2003, while the number of property crimes increased by less than one percent. The number of sentences imposed for drug crimes, however, decreased in 2003, although by only 0.5%. Drug crimes remain the most prevalent offense category, with 39.0% of all sentences imposed during 2003. The number of sentences imposed for other types of crime, including Obstructing Justice, Mob Action, Bringing Contraband into a Penal Institution, Transportation of Anhydrous Ammonia, and a variety of escape-related offenses, reached its highest level over ten years in 2003.

The average sentence lengths continued to fall for property and drug crimes. Sentences for drug crimes are among the lowest among the crime types. Average sentences for crimes against a person stayed consistent with 2002 data, although they have decreased by 1.4 years since 1994. Sentences for sex crimes have declined by 4.0 years (44.9%) during this time period. Mean sentences for other crimes have stayed at 2.3 years since 2000.

¹ Table 23 data do not reflect sentences that fall outside of the range specified for each case. Extended terms and shortened sentences are reported by offense in Tables 28 and 29.

Average Sentence Imposed for Selected Offenses

Trends in determinate sentence data among the most common offenses can be analyzed from Table 24.

All but two of the 308 determinate Murder/First Degree Murder sentences imposed during 2003 were for crimes committed after June 1987, and were sentenced under the First Degree Murder statute. The number of Murder/First Degree Murder sentences fell again during 2003, with no increases seen since 1998. The average sentence decreased by 0.4% in 2003, continuing a pattern of fluctuation throughout the last ten years.

The average sentence imposed for First Degree Murder continues to be relatively higher than those sentences imposed under the previous statute for Murder (see Appendix B). This can be explained to some extent by noting that 30.3% of the First Degree Murder sentences imposed during 2003 were between 41 and 60 years, which would have been in the extended range under the previous Murder statute. In addition, a growing number of First Degree Murder sentences are falling under the Truth in Sentencing statute. In 2003, 88.7% of inmates admitted for First Degree Murder must serve 100% of their sentence. On average the mean and median sentences imposed during 2003 are comparable to those handed down before Truth in Sentencing took effect in 1998.

All but one of the five selected Class X offenses showed increases in the number of sentences imposed during 2003. The largest increases were for Predatory Criminal Sexual Assault of a Child (20.4%) and Attempted Murder/Attempted First Degree Murder (18.2%). There were 963 Armed Robbery sentences handed down during 2003, rising to the volume experienced during the mid-1990s before the creation of Aggravated Robbery, a Class 1 felony that became effective on January 1, 1994. The number of sentences given for Aggravated Criminal Sexual Assault fell by 18.8% from 2002 to 2003. The number of sentences for Other Class X offenses rose slightly during 2003, mostly for Aggravated Vehicular Hijacking and Aggravated Battery with a Firearm.

Average sentences for most of the featured Class X offenses fell in 2003. Sentences for Aggravated Criminal Sexual Assault dropped by 1.4 years after a significant increase in 2002. However, sentences for this serious sex offense have been considerably higher over the past three years than during much of the previous seven years. Sentences for Attempted Murder/Attempted First Degree Murder fell by 1.8 years in 2003. Slight decreases were seen for Manufacture or Delivery of a Controlled Substance and Predatory Criminal Sexual Assault of a Child sentences. Armed Robbery sentence lengths rose in 2003 after two years of decline. Average sentences most the Other Class X offenses increased slightly in 2003.

Only 188 Attempted Murder/Attempted First Degree Murder sentences were handed down in 2003, a 51.8% reduction from five years earlier. This decline may be compensated by the rise in the number of other violent Class X felonies, which include Aggravated Battery with a Firearm and Aggravated Battery of a Child. In addition, Aggravated Criminal Sexual Assault sentences dropped another 18.8% throughout 2003, plunging 78.4% over the past ten years. This decline is counteracted by the use of the Class X offense of Predatory Criminal Sexual Assault of a Child, which took effect in 1996 and has averaged 216 sentences each year since 1998.

The number of sentences imposed for one of the newest Class 1 offenses, Aggravated Robbery, fell slightly during 2003. Despite the first annual decline since 1999, the number of sentences has escalated by 59.3% since prison sentences were imposed for this offense during 1995. The average sentence for Aggravated Robbery jumped in 2003, reaching 7.3 years, a six month increase over the 2002 mean.

The number of sentences imposed for two Class 1 drug offenses, Delivery of Controlled Substances to a Person Under 18 or in Specified Places and Manufacture or Delivery of a Controlled Substance, have been experiencing declines over the past few years after peaking in 1998. Sentences for Delivery of Controlled Substances to a Person Under 18 or in Specified Places have fallen by 64.0% since 1998, and, more significantly, by 49.1% in the past year alone. The number of sentences for Manufacture or Delivery of a Controlled Substance has fallen by 22.4% since 1998, but only slightly in the last three years. Nevertheless, average sentences for both drug offenses have risen slowly over the past ten years. The volume of sentences imposed for Class 1 Possession of a Controlled Substance, however, has been rising since 1998, reaching 393 sentences imposed during 2003, nearly doubling in volume over this time period. Average sentences, however, are down from the late 1990s.

The number of annual Residential Burglary sentences has been fluctuating throughout the past ten years. After increasing by 23.1% in 2002, they fell by 200 sentences in 2003, a 17.4% decline. Mean sentences for this Class 1 property offense remained consistent with 2002 averages after falling during the previous two years. Other Class 1 offenses increased by another 9.3% in 2003. The most notable increases were for the violent crimes of Aggravated Discharge of a Firearm, Robbery of a Senior Citizen, and Second Degree Murder. Only a few Other Class 1 sentences fell in 2003; Possession of a Stolen Vehicle had the most sizeable decline. Sentence lengths for Other Class 1 offenses rose by four months, on average, during 2003.

Class 2 offenses consist of a variety of violent, property and drug offenses. Among the violent offenses, the number of sentences imposed for Aggravated Criminal Sexual Abuse has risen throughout the past few years, rising by 7.4% during 2003, and by 39.5% since 1994. Sentencing data are available for two of the most recent offenses written into law, effective on April 13, 2000, Aggravated Unlawful Use of a Weapon and Aggravated Unlawful Use of a Weapon by a Felon. After reaching 462 sentences handed down during 2002, the volume dropped somewhat in 2003, falling 3.9%. The average sentence remained at 3.9 years.

Sentences for Robbery rose by 2.8% in 2003 after plummeting since 1997. Robbery sentences have decreased by 57.8% since 1994. As noted earlier, this decline is balanced by the use of the Class 1 offense of Aggravated Robbery since 1995. Average sentences fell in 2003 after an increase in 2002.

The two featured Class 2 property offenses experienced decreases in 2003. After an increase in 2002, the number of Burglary sentences decreased by 8.6% in 2003, and have fallen by 23.0% since 1994. Motor Vehicle Theft sentences also declined in 2003, dropping by 7.3% since 2002 and 32.0% since 1994. Burglary sentences remained constant while Motor Vehicle Theft sentences have fallen in each of the past two years.

The most notable decline among Class 2 felonies occurred for Manufacture or Delivery of a Controlled Substance. Despite an increase last year, these sentences have decreased by 53.7% from 1997. Average sentence lengths for this Class 2 drug crime have fluctuated only slightly since 1994.

The number of sentences imposed for Other Class 2 felonies jumped by another 6.1% during 2003, rising for the third straight year. Most of the latest increase is attributed to Class 2 Unlawful Use of a Weapon by a Felon, which doubled in sentences from 2002 to 2003. Few Other Class 2 offenses experienced declines in 2003. The average sentence length for Other Class 2 felonies fell slightly during 2003.

Relatively few changes took place in the volume of sentences imposed for Class 3 offenses increased during 2003. The largest increase from 2002 was for Retail Theft (1.7%) while Forgery (1.1%) showed a comparable increase. The largest decrease was for Theft, decreasing by only 3.3%. Aggravated Battery sentences declined by only four cases in 2003. The average sentence lengths for the most common Class 3 offenses remained consistent with those imposed over the last five years.

The number of sentences imposed for the Unlawful Use of a Weapon offenses continued a general decline that began in 1995, where it has dropped by 64.3%. This descent has been offset by sentences imposed for the new Class 2 offenses of Aggravated Unlawful Use of a Weapon, Aggravated Unlawful Use of a Weapon by a Felon, and Unlawful Use of a Weapon.

After three years of increases, the Other Class 3 offenses saw the volume of sentences imposed decline in 2003, particularly Manufacture or Delivery of Cannabis, Attempted Burglary, Delivery of Cannabis Near a School, and Manufacture or Delivery of a Controlled Substance. The number of sentences imposed also fell in 2003 for two other Class 3 felonies, Failure to Return to a Penal Institution and Bringing Contraband into a Penal Institution. The most noteworthy increase among Other Class 3 offenses took place for Driving while under the Influence of Alcohol or other Drugs for a Third or Subsequent time during a period in which Driving Privileges were Revoked or Suspended. There has been no change in the average sentence for this group of offenses since 2000.

Among the Class 4 offenses presented in Table 24, the largest increase in sentences imposed took place for Driving while under the Influence/Driving with a Suspended License. Sentences for this offense have nearly tripled since 1994, jumping another 21.3% from 2002. This was due to some changes in the statutes, including lowering the blood alcohol concentration in a person's blood or breath from 0.10 to 0.08, which took effect on July 2, 1997.

Also experiencing increases in the quantity of sentences imposed during 2003 were Retail Theft (12.4%), Possession of a Controlled Substance (7.2%) and Prostitution (6.3%). More importantly, these Class 4 felonies have witnessed significant increases throughout the past decade. Average sentences have remained constant for Possession of a Controlled Substance, but Retail Theft have declined to some degree and Prostitution sentences have fallen from an average of 2.1 years in 1994 to 1.3 years in 2003.

Two newly featured Class 4 felonies had seen major increases in the volume of sentences, but fell during 2003. Domestic Battery became a Class 4 felony on July 1, 1990. The number of sentences imposed reached 358 during 2002, but dropped by 7.0% during 2003. A similar pattern is seen for Violation of the Sex Offender Registration Act, which became a felony during 1996. The number of sentences had risen steadily, but fell by 2.3% in 2003.

The number of sentences also fell during 2003 for Class 4 Theft (-13.2%) and Obstructing Justice (-1.0%). The average sentence lengths increased or remained the same during 2003 for most featured Class 4 offenses, but mean sentences fell by just over one month this past year for Theft.

The number of Other Class 4 offenses increased by another 8.0% in 2003, reaching 2,620 sentences. The number of these sentences has increased by over 130.4% since 1994. The most significant increases from 2002 to 2003 were for Aggravated Unlawful Use of a Weapon, Possession of Cannabis, Criminal Damage to Property, Credit Card Fraud, Criminal Trespass to Residence, Mob Action, and Possession of Burglary Tools. There was a noteworthy increase in the number of sentences imposed for one other Class 4 felony, Transporting Anhydrous Ammonia, which became law on January 1, 2001 to address the problems associated with illegal methamphetamine production. There were another 72 sentences handed down in 2003 with an average sentence of 2.3 years.

Decreases were seen among the Class 4 offenses of Deceptive Practices, Criminal Damage to State Property, Manufacture or Delivery of Cannabis, and Violation of an Order of Protection. The mean sentence length for Other Class 4 felonies returned to 1.9 years after falling to 1.8 years during 2002.

Indeterminate Sentences Imposed

During 2003, there was one indeterminate sentence imposed. This case represents one inmate sentenced for a murder that took place before February 1978. The minimum sentence was 100.0 years while the maximum sentence was 300.0 years. There had been three indeterminate sentences imposed during 2002.

Cumulative Average Sentence Imposed: Indeterminate and Determinate Cases

Since 1978, 593,026 determinate prison sentences have been imposed in Illinois, averaging 4.8 years. These have consisted mostly of Class 2, Class 3, and Class 4 sentences (73.7%). Over this same time period, a total of 4,554 indeterminate prison sentences have been imposed for offenses committed before February 1, 1978. Average minimum and maximum indeterminate sentences for murder were considerably higher than those for determinate sentences. For the other offense classes, however, mean determinate sentences have been between the average minimum and the average maximum sentences for indeterminate cases.

Table 26
 Cumulative Average Sentence Imposed in Years by Offense Class
 Indeterminate and Determinate Cases
 1978 - 2003

<i>Offense Class</i>	<i>Indeterminate</i>			<i>Determinate</i> ¹	
	<i>Cases</i>	<i>Average Minimum</i>	<i>Average Maximum</i>	<i>Cases</i>	<i>Average</i>
<i>Murder</i>	384	43.9	93.0	8,278	32.8
<i>Class X</i>	1,138	8.5	16.6	67,892	11.3

<i>Total</i>	4,554	7.1	16.6	593,026	4.8

¹ Includes only those cases for which the sentence is in the range authorized by statute.

Sentences Imposed: Less Than Minimum and Extended Sentences

As Table 27 indicates, there were 39,538 Murder, Class X, Class 1, Class 2, Class 3, and Class 4 determinate sentences imposed during 2003, of which 677 (1.7%) were less than the minimum sentences that have been outlined by statute (see Appendix B). A majority (94.1%) of the sentences imposed that were less than the minimum were Class 1, Class 2, and Class 3 offenses, consisting mainly of manufacture/delivery-related drug and of property crimes (Table 28). Over 80% of sentences less than the minimum represented the holding offense at admission. The rest were imposed along with an offense or other offenses that were designated as the holding offense.

Table 27 also shows that extended terms were imposed in 5.0% of the determinate sentences that were handed down in 2003. These sentences are imposed for crimes with heinous or aggravating circumstances. Extended terms were used in all classes of offenses, but 92.7% were for Class 2, Class 3, and Class 4 sentences. Over seven percent of Murder and First Degree Murder sentences were extended beyond their maximums, but less than one percent of Class X sentences were longer than 30 years. Overall, less than 65% of these sentences were the holding offense at admission.

Extended sentences have been handed down for crimes against a person, especially Second Degree Murder, Robbery, Aggravated Criminal Sexual Abuse, Aggravated Battery, Unlawful Use of a Weapon/Unlawful Use of a Weapon by a Felon, and Domestic Battery (Table 29). There also have been a variety of property crimes (including Residential Burglary, Burglary, Motor Vehicle Theft, Forgery, Theft, and Retail Theft) and some drug offenses (mostly Class 2 Manufacture or Delivery of a Controlled Substance and Class 4 Possession of a Controlled Substance) in which extended sentences were used during 2003. Extended sentences were also imposed for Class 4 driving-related offenses, including Driving with a Suspended License, Driving while under the Influence of Alcohol or other Drugs, Aggravated Driving while under the Influence of Alcohol or other Drugs, and Aggravated Fleeing of the Police.

¹ Interpretation of sentence data must take into account that if the court does not specify the class of crime for drug offenses, the offense code for the highest class of crime is entered into the data base until the court clarifies the problem. Therefore, some cases that are less than the minimum may be the result of an incorrectly assigned offense class.

² The percentage of shortened sentences imposed which were a holding offense. The others were imposed but were in conjunction with another sentence that was the holding offense, which would most likely be an equal or longer sentence for an equal or higher class crime. Moreover, in some cases, inmates who were already in prison received a sentence in 2003; they would not be counted as an admission. Conversely, some inmates admitted from court during 2003 had been sentenced before 2003.

¹ The percentage of extended sentences imposed which were a holding offense. The others were imposed but were in conjunction with another sentence that was the holding offense, which would most likely be an equal or longer sentence for an equal or higher class crime. Moreover, in some cases, inmates who were already in prison received a sentence in 2003; they would not be counted as an admission. Conversely, some inmates admitted from court during 2003 had been sentenced before 2003.

Consecutive Sentences

Table 30 represents consecutive holding sentences imposed over the last ten years. The lower frequencies from 1995 to 2003 are the result of a change in the process in which consecutive sentences are calculated in the Offender Tracking System. For that reason, consecutive sentence data should not be used to make any inferences without further input from IDOC.

Class X offenses constitute over half of the 173 consecutive sentences handed down during 2003. There were 88 consecutive sentences imposed on Class X offenses in 2003, with their sentence lengths nearly doubled due to this extra time. There were 42 First Degree Murder sentences with an additional sentence imposed during 2003, which added over 18 years on average to these sentences. Only 43 consecutive sentences were handed down in 2003 for the lower Class 1, Class 2, Class 3 and Class 4 offenses.

¹Data in this table should be interpreted carefully. Refer to Appendix B for an explanation of the consecutive sentence calculations.

Drug Sentences Imposed

A contributing factor to prison population growth has been linked to the acceleration in sentences imposed for drug offenses. In view of that, as the prison population has shown some fluctuations over the past few years, so has the number of drug sentences imposed in Illinois. After declining in 1999 and 2000, the number of drug sentences imposed increased during 2001 and 2002, but fell by less than one percent in 2003. Overall, however, there has been a 21.1% increase in the number of sentences handed down across the state from 1994 through 2003.

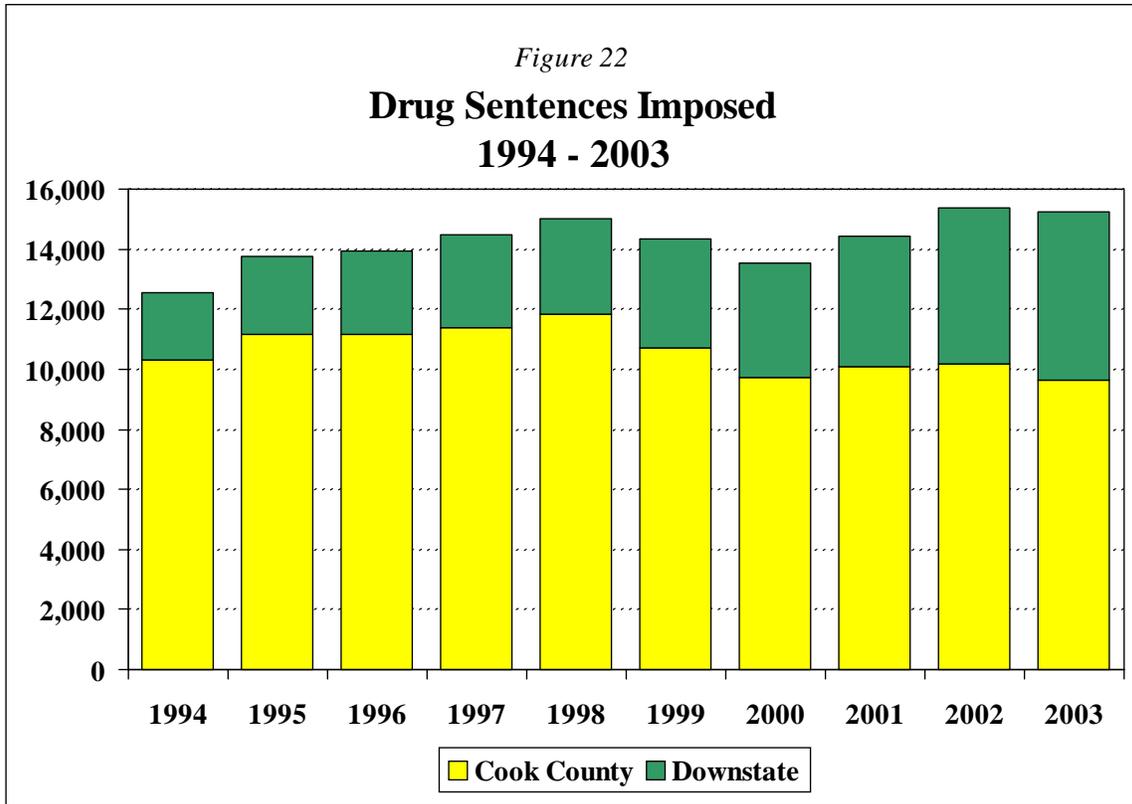

Trends in Cook County greatly affect statewide frequencies for drug offenses, as evidenced by the fact that almost two-thirds of drug sentences were handed down in Illinois' most populated county. However, Cook County's impact has been waning. The number of sentences for drug crimes handed down in Cook County actually fell by 5.1% during 2003; and the number of drug sentences imposed in Cook County during 2002 is not as high as it was during the mid- to late-1990s. Alternatively, downstate drug sentences have been increasing steadily since 1994, increasing by 146.5% over this time period, 7.4% in the past year alone.

Changes in the number of prison sentences imposed for Class 4 Possession of a Controlled Substance and Delivery of Controlled Substances to a Person under 18 or in Specified Places offenses have been the basis of these trends. Driving while under the Influence of Alcohol, Other Drug, or Combination of Both (DUI) and Aggravated DUI are also included in this group of drug offenses.

Despite recent increases in the number of felony drug sentences handed down to prison-bound offenders, the average length of drug sentences imposed has been steadily declining in Cook County in recent years, falling to an average of 2.5 years in 2003. Downstate, however, mean sentences have fluctuated over the last ten years, also declining in 2003. Statewide, there has been an overall decrease of nearly eight months per sentence throughout this time period, decreasing again during 2003.

Table 31
Drug Sentences Imposed
Cook County, Downstate, and Statewide
1994 - 2003

Year	Cook County		Downstate		Statewide	
	Number	Mean Sentence	Number	Mean Sentence	Number	Mean Sentence

2003	9,656	2.5	5,569	3.7	15,225	2.9

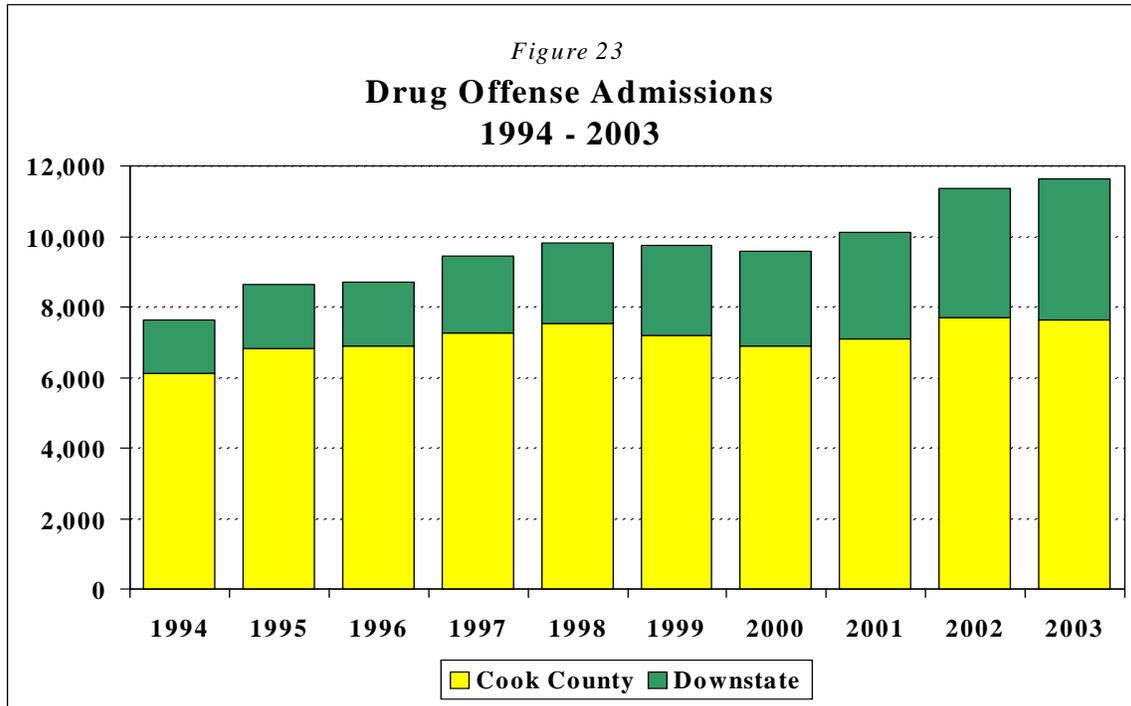

Drug Offense Admissions

Over 76% of drug offense sentences resulted in a holding offense at admission to prison. The total number of drug crime admissions in 2003 grew to 11,616, growing 21.2% over the past three years. Average sentences, however, remain lower than in previous years. Statewide, 52.0% of drug admissions were for Class 4 Possession of a Controlled Substance, and 22.1% were for Class 1 and Class 2 Manufacture or Delivery of a Controlled Substance. Nearly two-thirds of holding drug sentences were imposed in Cook County. The number of downstate admissions for drug offenses has been rising steadily, increasing by another 8.5% in 2003. The average downstate sentence declined slightly, but is over one year longer than cases from Cook County.

Table 32
Drug Offense Admissions
Cook County, Downstate, and Statewide
1994 - 2003

Year	Cook County		Downstate		Statewide

Most Frequent Sentences Imposed

The offense for which sentences were imposed most frequently during 2003 was, again, Class 4 Possession of a Controlled Substance (Table 33). The 8,109 sentences comprised 20.5% of all sentences imposed during 2003, and resulted in over 6,000 prison admissions. Burglary ranked second, followed by Class 2 Manufacture or Delivery of a Controlled Substance. Aggravated Battery and Class 3 Retail Theft rounded out the top five.

Each of the next five most frequent offenses - Class 3 Retail Theft, Class 1 Manufacture or Delivery of a Controlled Substance, Forgery, Class 4 Driving with a Suspended License, and Class 3 Theft - exceeded 1,000 sentences in 2003. These ten offenses comprised 55.0% of all sentences imposed in 2003. The remaining 15 offenses in this table totaled 8,346 and comprised another 21.1% of all sentences imposed during 2003.

Multiple sentences can be imposed on the same offender. Inmate-based prison admissions are also reported in Table 33 when the 25 most common offenses with prison sentences imposed transpired as the holding offense.

¹ Unlawful Use of a Weapon and Unlawful Use of a Weapon by a Felon were combined. Both offenses are Class 3 felonies and have similar average sentences.

² Aggravated Unlawful Use of a Weapon and Unlawful Use of a Weapon by a Felon were combined. Both offenses are Class 2 felonies and have similar average sentences.

³ There can be more prison admissions than sentences when inmates admitted had been sentenced in earlier years.

Note: The 25 most frequently sentenced offenses total 30,134 and comprise 76.1% of all felony sentences imposed in 2003.

Truth in Sentencing Admissions

Table 34 provides data regarding 1,135 offenders admitted to prison during 2003 under the Truth in Sentencing statute. Of these, 314 Truth in Sentencing admissions were for First Degree Murder. The sentence length for these inmates averaged 38.9 years; they will serve 100% of that sentence.

Among the offenses where the 712 offenders must serve 85% of their prison sentence, Class X Predatory Criminal Sexual Assault of a Child was most prevalent, accounting for 187 cases. The average sentence was 11.8 years. There were additional admissions for Class X offenses, including 133 for Attempted First Degree Murder, 109 for Aggravated Battery with a Firearm, and 61 for Aggravated Criminal Sexual Assault. Six other Class X offenses also required Truth in Sentencing during 2003, including Aggravated Battery of a Child and Aggravated Kidnapping. Among the 128 Class 1 offenses, the majority was for Criminal Sexual Assault; Class 1 sentences averaged 6.2 years. There were also 14 admissions for the Class 2 offense of Aggravated Battery of a Senior Citizen, averaging 5.0 years

Fifty-one of the 2003 admissions were for sentences imposed under the 85% Great Bodily Harm statute, averaging 16.5 years. Many of these admissions were for the Class X offenses of Armed Robbery, Home Invasion, Aggravated Vehicular Hijacking, and Armed Violence. There were also four admissions for Class 1 Aggravated Discharge of a Firearm.

Forty-four inmates were admitted to IDOC for committing an offense for which the sentencing judge determined that circumstances of Reckless Homicide while under the influence of alcohol or any other drugs warranted that the inmates serve 85% of their sentence. Their average sentence was 6.9 years.

Finally, 14 inmates were admitted throughout 2003 for committing Aggravated Arson, for which the sentencing judge determined that 85% of the sentence would be served. Their average sentence was 7.4 years.

Figure 25

Mean Sentences Imposed in Years by Judicial Circuit, Judicial District, and Region

Variation in the sentencing patterns among the judicial circuits, judicial districts, and regions in Illinois have remained consistent throughout the past decade. These data are available for selected offenses in Tables 36 through 70.

The mean sentences for Murder and First Degree Murder ranged from 22.5 years to 50.0 years among the judicial circuits. Cook County accounted for 73.1% of the sentences imposed for these offenses, but had an average sentence that was almost three years lower than the downstate region. The highest average sentences imposed were in the North Central (40.4 years) and the Northern (40.6 years) Judicial Districts; the Southern District had the lowest average sentence (34.0 years). None of the 21 downstate circuits had more than nine Murder and First Degree Murder sentences imposed during 2003; all but two circuits had at least one murder sentence imposed during 2003.

Cook County turned in 61.7% of the Class X sentences during 2003. Cook County imposed more than 60% of the Aggravated Criminal Sexual Assault sentences, but had an average sentence 4.3 years shorter than the rest of the state. Only one other circuit, the 18th, handed down more than five sentences for this sex offense; six circuits imposed none. The Southern District had the highest average sentence (18.7 years). Cook County imposed nearly 80% of the Armed Robbery sentences in 2003. In addition, along with the Central Judicial District, Cook County had the highest average sentence for this offense. Among circuits, the 15th Circuit had the lowest average sentence (7.3 years) while the 8th Circuit had the highest (15.6 years). Only 14 of the 22 judicial circuits handed down sentences for Attempted Murder and/or Attempted First Degree Murder during 2003; only 38 sentences were handed down outside of Cook County. There were a wide range of Attempted Murder and Attempted First Degree Murder sentences among the districts, between 12.1 years in Cook County and 21.4 years in the Central District.

Cook County imposed less than one-third of the sentences for Class X Manufacture or Delivery of a Controlled Substance during 2003; the Northern District imposed 30.3%. Sentences were higher downstate, particularly in the Southern District, which includes the 4th Judicial Circuit. The downstate circuits imposed nearly 60% of the sentences for Predatory Criminal Sexual Assault of a Child. Sentences were lowest in the North Central District, including the 12th and 21st Judicial Circuits, and highest in the Central District, chiefly in the 5th, 6th and 11th Circuits.

Downstate circuits had a relatively high percentage of Other Class X sentences imposed (40.8%), with nearly half of these for Home Invasion and Delivery of Controlled Substances to a Person Under 18 or in Specified Places. Cook County had more sentences handed down for Aggravated Vehicular Hijacking, Aggravated Battery with a Firearm, and Aggravated Kidnapping. Other Class X sentences ranged from 7.7 years in the 15th Judicial Circuit to 18.5 years in the 5th Judicial Circuit, and were highest in the Southern and Central Districts. The mean sentence in Cook County was one year lower than the downstate average.

During 2003, 71.1% of the Aggravated Robbery sentences were handed down in Cook County. Only two other judicial circuits, the 6th and 18th, imposed more than ten Aggravated Robbery sentences; five circuits imposed none. Sentences ranged from a low of 4.0 years in the 2nd

Judicial Circuit to 11.3 years in the 11th Circuit. Aggravated Robbery sentences were lowest in the Southern District and Cook County and highest in the North Central and Central Districts. Only 15 of the 22 circuits handed down sentences for Class 1 Delivery of Controlled Substances to a Person under 18 or in Specified Places; however, over 43% of these sentences were imposed in downstate circuits, which is a higher percentage than in the past. The Southern and North Central Districts had the lowest sentences; the Central District, especially the 6th and 7th Circuits, had sentences greater than the rest of the state. For Class 1 Manufacture or Delivery of a Controlled Substance, downstate circuits handed down 53.7% of the sentences, but Cook County imposed some of the lowest sentences throughout the state. The Central District, particularly the 6th, 8th and 11th Judicial Circuits, had the highest sentences. A similar pattern is seen for Class 1 Possession of a Controlled Substance. Downstate circuits handed down just over half of the sentences and Cook County had the lowest average sentence among judicial districts. The Northern and North Central Judicial Districts had some of the highest sentences.

Downstate circuits also accounted for more than half (57.2%) of all Residential Burglary sentences imposed in 2003. Along with the Central Judicial District, Cook County had the highest sentences. The Southern and North Central Districts, particularly the 9th and 1st Judicial Circuits, imposed the lowest sentences. Among the Other Class 1 offenses, 52.8% were imposed in Cook County, half of which were for Aggravated Discharge of a Firearm, Attempted Armed Robbery, Robbery of a Senior Citizen, and Possession of a Stolen Vehicle. Criminal Sexual Assault and Aggravated Discharge of a Firearm were the predominant Other Class 1 offenses imposed downstate. Average sentences ranged from 5.4 years in the 12th Judicial Circuit to 8.6 years in the 20th Judicial Circuit, and were highest in the Southern District.

For Class 2, Class 3, and Class 4 offenses, the average sentences imposed among circuits, districts, and regions are historically lower due to limited sentencing ranges.

Among Class 2 offenses, 73.3% of the Aggravated Criminal Sexual Abuse sentences were imposed downstate. The lowest sentences were handed down in the 9th Judicial Circuit while the longest sentences were imposed in the 17th and 21st Circuits. Average sentences among the Judicial Districts were relatively consistent, ranging from a mean of 4.3 years in Cook County and the Southern District to 4.7 years in the Northern and Central Districts. Cases for Aggravated Unlawful Use of a Weapon and Aggravated Unlawful Use of a Weapon by a Felon were seen almost exclusively in Cook County. Only 7.7% of these sentences were imposed downstate, with a high proportion in the 16th and 17th Judicial Circuits in the Northern District. There were no such sentences imposed in eight of the 22 circuits. Sentences were highest in the Central District, but only three of these Class 2 weapons sentences were imposed in that district during 2003.

Downstate circuits imposed 58.1% of the Burglary sentences in 2003. Average Burglary sentences were fairly uniformly distributed among the districts and most of the downstate circuits, and were highest in Cook County. For Class 2 Manufacture or Delivery of a Controlled Substance, 62.8% of the sentences came from Cook County. Sentences were highest in the Central District, especially in the 7th, 8th and 11th Judicial Circuits. Nearly 60% of the Motor Vehicle Theft sentences were imposed in Cook County. Average sentences ranged from 3.0 years in the 8th Judicial Circuit to 4.8 years in the 5th Circuit. Average sentences were similar in Cook County and the downstate districts. Over two-thirds of the Robbery sentences were

imposed in Cook County, which had the lowest average sentence among the districts. Robbery sentences were highest in the Central District, including most of its judicial circuits.

The majority (59.0%) of Other Class 2 sentences were imposed downstate during 2003; most of this difference is due to a higher number of sentences imposed for Driving while under the Influence of Alcohol or other Drugs for a Fourth or Subsequent time during a period in which Driving Privileges were Revoked or Suspended, Possession of a Stolen Firearm, Aggravated Domestic Battery, Arson, and Criminal Drug Conspiracy. Cook County imposed a greater proportion of sentences for the Class 2 offenses of Unlawful Use of a Weapon by a Felon and Aggravated Battery of a Senior Citizen. Average sentences were similar in Cook County and the downstate districts. Amongst the judicial circuits, average sentences ranged from a low of 3.6 years in the 2nd Circuit to a high of 4.9 years in the 8th Circuit.

The volume of sentences imposed during 2003 was higher downstate for all Class 3 offenses except Retail Theft and Unlawful Use of a Weapon/Unlawful Use of a Weapon by a Felon. Over 64% of the Aggravated Battery sentences were imposed downstate, where average sentences ranged from 2.6 years in the 21st Judicial Circuit to 3.4 years in the 5th and 7th Circuits. Cook County and the Central District had the highest sentences. Cook County imposed only 25.1% of the Forgery sentences and had the lowest average sentence among the districts, along with the Southern District. Forgery sentences ranged from 2.3 years in the 20th Circuit to 3.5 in the 8th and 15th Circuits. Retail Theft was prevalent in Cook County, turning out 60.0% of the sentences. Interestingly, there were nine downstate circuits that imposed less than ten Retail Theft sentences throughout 2003, and 58.1% of the downstate sentences were imposed in the Northern District, especially in the 18th and 19th Judicial Circuits. The average sentences in Cook County and the Southern Judicial District were lowest. On the other hand, 64.7% of the Theft sentences were given out downstate, with lower sentences in Cook County. Theft sentences were as low as 2.2 years in the 9th Judicial Circuit and as high as 3.5 years in the 8th Circuit.

Cook County imposed 68.1% of the Unlawful Use of a Weapon/Unlawful Use of a Weapon by a Felon offenses, but had the lowest average sentence among the districts. Sentences were highest in the Central Judicial District, especially in the 5th, 7th and 8th Circuits. Downstate counties handed down 61.6% of the Other Class 3 sentences, and had more sentences imposed for Manufacture or Delivery of Cannabis, Attempted Manufacture or Delivery of a Controlled Substance, Driving while under the Influence of Alcohol or other Drugs for a Third or Subsequent time during a period in which Driving Privileges were Revoked or Suspended, Possession of a Counterfeit Credit Card, and Failure to Report to a Penal Institution. The Class 3 felonies of Attempted Robbery, Attempted Burglary and Delivery of Cannabis in or near a School took place in Cook County more often. Among districts, Cook County had the lowest average sentence for Other Class 3 offenses while the Central Judicial District had the highest average sentence.

All but 33 of the 333 Class 4 Domestic Battery sentences were imposed in the downstate circuits. Sentences were lowest in the Southern Judicial District, particularly in the 2nd, 3rd and 20th Circuits. Nearly 80% of the Class 4 sentences for Driving while under the Influence and Driving with a Suspended License were given out in the downstate region. Furthermore, 37.0% of the downstate sentences were imposed in the Northern District. In addition, average sentences were

longer in all of the downstate circuits than in Cook County. All but eight of the 519 Obstructing Justice sentences imposed during 2003 were from the downstate circuits. Sentences were longer downstate, and ranged from a 1.1-year average in the 15th Judicial Circuit to 2.4 years in the 5th Circuit.

During 2003, the majority (76.9%) of Class 4 Possession of a Controlled Substance sentences were imposed in Cook County. The Northern District had the most sentences imposed within the downstate area; sentences were highest in the Southern and Central districts. Possession of a Controlled Substance accounted for 49.5% of all Class 4 sentences imposed statewide, and 65.9% of all Class 4 sentences that were handed down in Cook County.

Class 4 Prostitution is another crime that was exclusively used in Cook County. In 2003, over 90% of these sentences were handed down in Cook County. Only seven other circuits turned out prison sentences for Prostitution, although their sentences were higher than those imposed in Cook County. Cook County handed down 65.0% of the Class 4 Retail Theft but only 32.9% of the Class 4 Theft sentences in 2003. Average sentences for these theft offenses were lowest in Cook County and the Southern District.

Over half (53.7%) of the sentences for a Violation of the Sex Offender Registration Act were distributed in Cook County, while 16 of the 21 downstate circuits imposed less than ten sentences during 2003. Cook County had the lowest sentence lengths; sentences in the Central District, including the 5th and 8th Judicial Circuits, were highest. Nearly 60% of the Other Class 4 offenses were imposed downstate; these offenses included Deceptive Practices, Criminal Damage to Property, Unlawful Restraint, Credit Card Fraud, Aggravated Fleeing of the Police, and Violation of an Order of Protection. Most of the sentences for the Class 4 felonies of Manufacture or Delivery of Cannabis, Possession of Cannabis, Possession of Burglary Tools, and Aggravated Unlawful Use of a Weapon were handed down in Cook County. Average sentences for Other Class 4 offenses were shorter in Cook County and highest in the Central District, including the 5th, 8th and 11th Judicial Districts.

Admissions

Throughout most of the previous tables in Part III, a case has represented a sentence that was imposed by the court. When an offender is sentenced to IDOC for more than one offense, sentence data are reported for the holding offense. When examining admission data, only one sentence, which is associated with the holding offense, is reported. Table 71 provides admission data from 1994 through 2003.

Court admissions include adults admitted to IDOC from criminal court for a felony conviction, and juvenile felons or court commitments transferred from the Juvenile Division to the Adult Division due to their age. Other inmates can be sentenced to life, i.e., natural life imprisonment (730 ILCS 5/5-8-1), to death (720 ILCS 5/9-1), or as a Sexually Dangerous Person (SDP) (725 ILCS 205/8). Technical violations include adults readmitted due to a violation of the Parole or Mandatory Supervised Release Agreement while on MSR or parole (see Appendix B).

The total number of inmates admitted to prison rose by 60.3% from 1994 to 2003, increasing by nearly 31% since 1999. Increases over the past four years have been affected by a high volume of technical violations. The number of court admissions rose steadily from 1994 through 1998, fell for two years, and jumped to its highest level during 2003, with 28,095 admissions. However, the average sentence lengths have been steadily declining since 1994, with the mean sentences dropping by 1.3 years, 24.1%, over the last ten years.

The number of admissions for inmates with a life sentence increased from 1994 through 1998, but had fallen steadily through 2002, and then increased slightly in 2003. The number of death sentences imposed each year has been sporadic, with a high of 13 sentences in 1996 and a low of one sentence in 2001. There were seven Sexually Dangerous Person (SDP) admissions in 2003, peaking at 21 admissions in 1999.

The volume of technical violation admissions has been determined by IDOC policies. A steady climb was seen from 1994 through 1998. But the number of admissions jumped nearly 500% over the next three years, then fell during 2002, and rose by nearly 1,000 cases during 2003.

Table 71
Average Sentence Imposed in Years
Admissions 1994 - 2003

Year	Court Admissions			Life	Death	SDP	Technical Violations	Total Cases
	Number	Mean	Median

Note: The number of court admissions include unclassified and/or missing cases that are not reported in Tables 72 and 73.

Court Admissions by Offense Class

Table 72 lists court admission data by offense class. In some cases, there will be more admissions than sentences imposed; data in Table 72 include all admissions while sentence imposed data in Table 22 include only sentences within the statutory ranges.

During 2003, there were 355 admissions for inmates with a holding offense of Murder or First Degree Murder. This is a 27.1% decrease from the number of admissions in 1994; however, the 2003 total represents the second annual increase in a row. The average sentence for Murder and First Degree Murder admissions has seen numerous fluctuations over the past decade, with nearly a five-year increase (13.7%) over the last two years.

The number of admissions for Class X holding offenses had been declining since 1994 (-47.3% between 1994 and 2001), although there was a slight 1.9% increase in 2003. The average sentence for Class X felonies rose to and remained at 11.0 years from 1996 to 1998, but has dropped to 10.2 years by 2003. After rising from 1994 through 1998, the volume of Class 1 admissions has fallen back to its 1994 level this year. The average Class 1 sentence has risen by six months over this ten-year period.

Class 2 and Class 3 admissions experienced a similar pattern. The average Class 2 sentence increased by four months over this period of time, but the mean sentences have been between 4.4 and 4.5 years since 1995. Class 3 sentences have fallen consistently from 3.0 years in 1994 to 2.8 years in 2003.

The largest increase over the past ten years has been for Class 4 admissions, constantly rising to an overall increase of 186.8%. It is the offense class that showed the greatest increase (9.2%) in the number of admissions from 2002 to 2003. Over half (53.0%) of the Class 4 admissions were for Possession of a Controlled Substance. Sentences for Class 4 admissions fell to their lowest point during 2002 and 2003, averaging 1.8 years.

Court Admissions by Offense Type

Table 73 lists court admission data by offense type. After peaking in 1994, the volume of admissions for crimes against a person had declined by 17.9% through 2001. Since, however, admissions for crimes such as homicide, battery, robbery, armed violence, and unlawful use of a weapon have increased by 23.2%. The average sentence for the inmates admitted for these violent crimes continued a downward trend through 2003. The number of admissions for sex crimes, which include Sexually Dangerous Persons, rose by 60.7% during the past ten years, and by 2.7% in the last year alone. Average sentences for sex offenses experienced a significant decline, however, falling from 9.7 years during its peak year of 1996 to 4.9 years in 2003. Interestingly, median sentences usually show little change over time; however, the median sentence length for sex crimes has dropped by three years throughout the past decade.

The number of admissions for property crimes has fluctuated considerably since 1994. Admissions for such crimes as burglary, retail theft, forgery, residential burglary, and motor vehicle theft jumped by 17.8% in 2002 and by another 1.6% in 2003, after declining each year since 1999. Average sentences for property offense admissions have fallen by over six months throughout the past ten years. Admissions for drug crimes rose by 52.3% since 1994, growing 21.4% over the past three years. Drug crimes, consisting mostly of Class 4 Possession of a Controlled Substance, and Class 1 and Class 2 Manufacture or Delivery of a Controlled Substance, remained as the most prevalent offense category, with 41.4% of all admissions during 2003. Like the other offense type categories, average sentences for drug crime admissions have fallen steadily since 1994.

The number of admissions for other types of crime, including Obstructing Justice, Mob Action, Bringing Contraband into a Penal Institution, and a variety of escape-related offenses, had risen steadily from 1994 through 1999, but have fallen over the past two years. Average sentences for the remaining admissions have declined gradually since 1994.

**Appendix B:
Definitions
and
Data
Interpretations**

General Methodology

All data presented in the *2003 Statistical Presentation* have been extracted from the Illinois Department of Corrections' (IDOC) Offender Tracking System (OTS) database. Methods specific to the tables within this report are discussed in detail throughout the following pages.

Each offense presented in this report is followed by a reference to the class of offense as defined in the Unified Code of Corrections (730 ILCS 5/5-5-1). All offenses refer to offense categories enacted with determinate sentencing legislation as of February 1, 1978. For the purposes of sentencing, felonies have been categorized into offense classes to indicate the relative seriousness of the crimes committed by offenders sentenced to prison in Illinois. First Degree Murder, as a separate class of offense, is the most serious felony, followed by Class X, Class 1, Class 2, Class 3, and Class 4.

Historically, offenders sentenced to prison receive a determinate or indeterminate sentence dependent on when the crime was committed. Determinate sentences are designated fixed sentences derived from a range established by statute for each offense class (730 ILCS 5/5-8-1). Inmates have a predetermined release date calculated from their date of admission, sentence length, and good time credits. Indeterminate sentences have a minimum and maximum range established by the sentencing judge; inmates are released after review by the Prisoner Review Board. Only offenders who committed their crime before February 1, 1978 are eligible to receive an indeterminate sentence. However, some inmates who were given an indeterminate sentence opted for a sentence with a set release date when the current determinate sentencing structure was implemented. Inmates with an indeterminate life sentence can have a parole hearing with the Prisoner Review Board. Inmates who receive a life sentence under determinate sentencing serve a term of "natural life," and may not be paroled or released except through executive clemency.

Inmates are eligible to receive credit on their sentences based on good conduct, which is reviewed by the Prisoner Review Board (730 ILCS 5/3-6-3). There are several types of credit that may be awarded. First, each inmate shall receive one day of good conduct credit which reduces by one day the period of incarceration set by the court for each day in prison (referred to as day-for-day), except when a term of "natural life" or death has been imposed. Second, the Director of IDOC may award up to 180 days of additional good conduct credit for meritorious service as the Director deems proper, except that only 90 days may be awarded to inmates serving a sentence for a conviction of selected offenses. Third, additional credit may be awarded to qualified inmates for participation in educational, vocational, substance abuse, or Correctional Industries programs provided by IDOC; one-half day of Earned Time credit is awarded for each day an inmate spends in a program, but only after specific goals have been accomplished. IDOC rules and regulations prescribe the revocation, suspension, or reduction of such credits for specific rule violations during incarceration. When appropriate, these revoked, suspended or reduced credits may be restored after review by the Director and the Prisoner Review Board.

When reference is made to sentences imposed, each sentence, not the number of offenders, is being reported. When reference is made to admissions, exits or the prison population, a case is a record of an inmate who is sentenced to IDOC. When an inmate is sentenced for more than one offense, data are reported for the holding offense. The holding offense is the offense that keeps

the inmate in IDOC custody for the longest period of time. All offenses listed on the court document, i.e., the mittimus, are entered into OTS and a sentence calculation software program is run to determine the holding offense. Due to the complexity of the sentence calculation program, there will be occasions in which the most serious crime or the offense with a higher offense class is not determined to be the holding offense. This could occur when there are several offenses with the same sentence on one mittimus, truth in sentencing cases are blended with sentences with day-for-day and other good conduct credits, there are consecutive sentences imposed, inmates with an indeterminate sentence were released and returned to IDOC with a new determinate sentence, or inmates receive a new felony conviction for a crime committed while incarcerated.

The most relevant offenses, usually emphasized based on prevalence of cases, have been selected for presentation. Also, as a result of new laws enacted in Illinois (First Degree Murder, Predatory Criminal Sexual Assault of a Child, Aggravated Robbery, and Failure to Register as a Sex Offender), changes in the statutes (Delivery of Controlled, Counterfeit or Look-alike Substances to a Person under 18 or in a Truck Stop or Safety Rest Areas, on School Property, or Places of Religious Worship; Aggravated Unlawful Use of a Weapon/Aggravated Unlawful Use of a Weapon by a Felon; and Driving while under the Influence of Alcohol or other Drugs during a period in which Driving Privileges were Revoked or Suspended), or more use of prison sentences (Driving while under the Influence of Alcohol, Other Drug, or Combination of Both; Driving With a Suspended License; Obstructing Justice; Domestic Battery; and Prostitution), each year new offenses may be added to or aggregated within some tables.

Beginning with the *2002 Statistical Presentation*, an effort has been made to present sentences imposed and exit data for even more offenses. Tables 15 and 24, as well as Tables 36 to 70, were expanded to include any offense with more than 300 cases in 2002. This expansion will allow trends to be observed and explained as new laws are established and new sentencing patterns emerge. The prevalence of Class 4 offenses, many with relatively short lengths of stay, can be noted as well. In addition, beginning with the *2002 Statistical Presentation*, admission data are reported in Tables 71 to 73.

In July 1987, Murder was changed to First Degree Murder (Chapter 720 ILCS 5/9-1), including definitional adjustments of First Degree Murder. For First Degree Murder, the maximum sentence was increased from 40 years to 60 years; the extended term was lengthened from 80 years to 100 years.

In prior *Statistical Presentations*, the number of Murder sentences, as defined under the pre-1987 statute, may have been inaccurately reported. Most offenders recently sentenced to prison for murder committed their crime after June 1987; therefore, they would qualify under the First Degree Murder definition. Misinterpreted data were entered from court documents into the OTS database. Discrepancies from previously published data have been corrected by Record Office staff.

Another change from earlier *Statistical Presentations* deals with offenses that are included under the sentencing statute (730 ILCS 5/5-5-3(c)(8)) which state defendants who are convicted of a Class 1 or Class 2 felony after having been twice convicted of any Class 2 or greater felony

would be sentenced as a Class X offender. These data were included in the Class X categories and maintained in OTS in the Class X category until 1995.

However, in People v. Jameson (People v. Jameson, 162 Ill. 2d 282 (1994)), the Illinois Supreme Court concluded that the State was not required to give defendants pretrial notice that they would be sentenced as Class X offenders. Nevertheless, the Illinois Supreme Court reinstated an earlier order directing the court to amend the mittimus of each of the defendants involved in the appeal to reflect that they were not convicted of Class X offenses. Due to this court decision, sentencing data in the *2003 Statistical Presentation* were reported in the Class 1 or Class 2 categories for which their third offense should be indexed. For example, all Residential Burglary sentences imposed from 1987 to 2003 are now included in the Class 1 category, even if they were the offense for which the inmates received their third conviction. Therefore, sentence imposed data distributed into offense class categories will not match data reported in *Statistical Presentations* prior to 1995. Data for exits and end-of-year populations were not changed; they were classified as Class X offenses at the time the data were produced and consistency with other IDOC reports must be preserved.

Data are reported for Delivery of Controlled, Counterfeit or Look-alike Substances to a Person under 18 or in a Truck Stop or Safety Rest Areas, on School Property, or in Places of Religious Worship (Chapter 720 ILCS 570/407). For brevity purposes, data for this offense are labeled as Delivery of Controlled Substances to a Person under 18 or in Specified Places.

Offenses also are grouped into offense types: crimes against a person, property crimes, drug offenses, sex offenses, and other crimes. Offenses were classified into these categories as determined by the Uniform Crime Reporting systems used by the Federal Bureau of Investigation and the Illinois State Police. Crimes against a person include homicide, battery, robbery, armed violence, weapons offenses, and those offenses that imply a high risk of personal injury. Burglary, theft, and various types of fraud are part of the property crime offense type. Drug offenses include any manufacture, delivery, or possession of a controlled substance and cannabis. Except when noted, drug crimes also include offenses for driving while under the influence. Sex offenses include rape, criminal sexual assault or abuse, prostitution, and other such crimes. The other offenses are those not included in the above categories, such as disorderly conduct, gambling, escape, bail bond violation, obstructing justice, bringing contraband into a penal institution, and business offenses. Generally, crimes against a person and assaultive sex offenses are classified as "violent crimes."

Descriptive statistics are used in this report. In addition to the arithmetic mean, the median is utilized as a measure of average sentence and length of stay. The mean is defined as the arithmetic average of the raw data. It is calculated by summing the data for all cases and dividing by the total number of cases. The median is the measurement where 50% of the observed values are less than the midpoint and 50% of the observed values are greater than the midpoint. The mean is affected by extreme low and high values whereas the median is sensitive to an uneven distribution of cases. A large percentage of low values will produce a mean greater than the median. Conversely, a large percentage of high sentences and lengths of stay produces a mean less than the median. When the mean and median are equal, the distribution of values is symmetrical, i.e., data both greater than and less than the average are distributed evenly.

A standard deviation is usually reported with a mean. The standard deviation is used to define the spread of values, i.e., sentences and lengths of stay, around the mean. It is a statistical measure of dispersion or variability. A lower standard deviation indicates the values are relatively close to the mean; a higher standard deviation signifies a wider range of values. The standard deviation is often used because it has a consistent meaning from one distribution to the next. When comparing data among offenses within the same class of crime or judicial circuit, the means may be similar, but dissimilar standard deviations would indicate different spreads of those values around that mean. Adding one standard deviation and subtracting one standard deviation from the mean yields a range that includes approximately 68% of the cases.

There also have been changes in the Statistical Package for the Social Sciences (SPSS). SPSS Release 4.1 was used in the 1990 through 1997 reports. SPSS-X (Version 2.1) was utilized to calculate statistics in the 1988 and 1989 reports. Prior to 1988, SPSS (Version 9.7) was employed. SPSS for Windows (Version 7.5) was used to analyze data for the 1998 through 2001 *Statistical Presentations*, and SPSS for Windows (Version 11.5) was used to analyze data for the 2002 and 2003 *Statistical Presentations*. Adjustments in the internal formulas and logarithms may account for slight statistical calculation differences.

Some data reported in the 2003 *Statistical Presentation* might not be comparable with data published in previous reports due to adjusted data and improved methodologies.

Percentages described in the tables may not add to 100% due to rounding.

Any questions regarding the methodology or data reported in the 2003 *Statistical Presentation* should be directed to the Planning and Research Unit.

Truth in Sentencing Statute 730 ILCS 5/3-6-3(a)(2)

In August 1995, Truth in Sentencing legislation was enacted under Public Act 89-404. However, this law was declared unconstitutional in its entirety by the Appellate Court of Illinois and the Illinois Supreme Court for violation of the single-subject rule of the State constitution. Public Act 90-593, which became effective on June 19, 1998, reenacted the original Truth in Sentencing provisions. Changes have been made since that time with the passage of Public Acts 90-740, 91-121, 91-357, 92-178, and 92-854.

Cited from the Unified Code of Corrections (730 ILCS 5/3-6-3(a)(2)), Truth in Sentencing provisions are described below:

(2) The rules and regulations on early release shall provide, with respect to offenses committed on or after June 19, 1998, the following:

- (i) that a prisoner who is serving a term of imprisonment for first degree murder or for the offense of terrorism shall receive no good conduct credit and shall serve the entire sentence imposed by the court;

(ii) that a prisoner serving a sentence for attempt to commit first degree murder, solicitation of murder, solicitation of murder for hire, intentional homicide of an unborn child, predatory criminal sexual assault of a child, aggravated criminal sexual assault, criminal sexual assault, aggravated kidnapping, aggravated battery with a firearm, heinous battery, aggravated battery of a senior citizen, or aggravated battery of a child shall receive no more than 4.5 days of good conduct credit for each month of his or her sentence of imprisonment; and

(iii) that a prisoner serving a sentence for home invasion, armed robbery, aggravated vehicular hijacking, aggravated discharge of a firearm, or armed violence with a category I weapon or category II weapon, when the court has made and entered a finding, pursuant to subsection (c-1) of Section 5-4-1 of this Code, that the conduct leading to conviction for the enumerated offense resulted in great bodily harm to a victim, shall receive no more than 4.5 days of good conduct credit for each month of his or her sentence of imprisonment.

(2.1) For all offenses, other than those enumerated in subdivision (a)(2) committed on or after June 19, 1998, and other than the offense of reckless homicide as defined in subsection (e) of Section 9-3 of the Criminal Code of 1961 committed on or after January 1, 1999, or aggravated driving under the influence of alcohol, other drug or drugs, or intoxicating compound or compounds, or any combination thereof as defined in subparagraph (F) of paragraph (1) of subsection (d) of Section 11-501 of the Illinois Vehicle Code, the rules and regulations shall provide that a prisoner who is serving a term of imprisonment shall receive one day of good conduct credit for each day of his or her sentence of imprisonment or recommitment under Section 3-3-9. Each day of good conduct credit shall reduce by one day the prisoner's period of imprisonment or recommitment under Section 3-3-9.

(2.3) The rules and regulations on early release shall provide that a prisoner who is serving a sentence for reckless homicide as defined in subsection (e) of Section 9-3 of the Criminal Code of 1961 committed on or after January 1, 1999, or aggravated driving under the influence of alcohol, other drug or drugs, or intoxicating compound or compounds, or any combination thereof as defined in subparagraph (F) of paragraph (1) of subsection (d) of Section 11-501 of the Illinois Vehicle Code, shall receive no more than 4.5 days of good conduct credit for each month of his or her sentence of imprisonment.

Cited from the Unified Code of Corrections (720 ILCS 5/9-3 (e), (e-5), (e-7) and (e-8)), Reckless Homicide is defined as follows:

(e) Except as otherwise provided in subsections (e-5), (e-7) and (e-8), in cases involving reckless homicide in which the defendant was determined to have been under the influence of alcohol or any other drug or drugs as an element of the offense, or in cases in which the defendant is proven beyond a reasonable doubt to have been under the influence of alcohol or any other drug or drugs, the penalty shall be a Class 2 felony, for which a person, if sentenced to a term of imprisonment, shall be sentenced to a term of not less than 3 years and not more than 14 years.

(e-5) In cases involving reckless homicide in which the defendant was determined to have been under the influence of alcohol or any other drug or drugs as an element of the offense, or in cases in which the defendant is proven beyond a reasonable doubt to have been under the influence of alcohol or any other drug or drugs, if the defendant kills 2 or more individuals as part of a single course of conduct, the penalty is a Class 2 felony, for which a person, if sentenced to a term of imprisonment, shall be sentenced to a term of not less than 6 years and not more than 28 years.

(e-7) Except as otherwise provided in subsection (e-8), in cases involving reckless homicide in which the defendant was driving in a construction or maintenance zone, as defined in Section 11-605 of the Illinois Vehicle Code, the penalty is a Class 2 felony, for which a person, if sentenced to a term of imprisonment, shall be sentenced to a term of not less than 3 years and not more than 14 years.

(e-8) In cases involving reckless homicide in which the defendant was driving in a construction or maintenance zone, as defined in Section 11-605 of the Illinois Vehicle Code, and caused the deaths of 2 or more persons as part of a single course of conduct, the penalty is a Class 2 felony, for which a person, if sentenced to a term of imprisonment, shall be sentenced to a term of not less than 6 years and not more than 28 years.

Cited from the Unified Code of Corrections (730 ILCS 5/3-6-3(a)(2)), Truth in Sentencing provisions are described below:

(2.4) The rules and regulations on early release shall provide with respect to the offenses of aggravated battery with a machine gun or a firearm equipped with any device or attachment designed or used for silencing the report of a firearm or aggravated discharge of a machine gun or a firearm equipped with any device or attachment designed or used for silencing the report of a firearm, committed on or after the effective date of this amendatory Act of 1999, that a prisoner serving a sentence for any of these offenses shall receive no more than 4.5 days of good conduct credit for each month of his or her sentence of imprisonment.

(2.5) The rules and regulations on early release shall provide that a prisoner who is serving a sentence for aggravated arson committed on or after the effective date of this amendatory Act of the 92nd General Assembly shall receive no more than 4.5 days of good conduct credit for each month of his or her sentence of imprisonment.

Part I

Impact on the Population

A case is a record of an inmate who served a period of time in prison. When an inmate serves time for more than one offense, time served is reported for the holding offense (described above). The holding offense is the offense that keeps the inmate in IDOC custody for the longest period of time.

The end-of-year prison populations from 1970 through 2003 are listed in Table 1, exhibiting trends over an extended time period. Prison population numbers and percentages in Table 2

include all inmates incarcerated on December 31, 1977 and 2003, respectively. Inmates released during 1978 and 2003 are presented in Table 4. These data are provided to illustrate the full impact of determinate sentencing by comparing the actual time served by inmates released during the last year of indeterminate sentencing to inmates released with a determinate sentence during 2003. Table 6 reports data for 2003. The remaining tables and corresponding charts in Part I feature populations at the end of 1994 and/or through 2003 to show the most recent ten-year period.

For cases in Table 5 and for admissions and exit data in Table 6, only cases admitted from court are included; inmates returned for a technical violation of the Parole or Mandatory Supervised Release Agreement are excluded. Only cases with a determinate sentence and cases originally sentenced with an indeterminate sentence for which inmates opted for a set release date are included. Life, death, and Sexually Dangerous Person (SDP) cases are excluded from the length of stay calculations in Table 4 and Table 5.

The data in Table 7 represent cases with an indeterminate or indeterminate day-for-day sentence. Indeterminate cases that were received from court are included; cases returned as a technical violator of parole are excluded. Cases given an indeterminate life sentence before February 1978 or that were on bond on December 31, 2003 are not counted in Table 7. Time projected to be served and time left to serve could not be calculated or predetermined because release can only be granted by the Prisoner Review Board or the Governor.

The numbers of indeterminate cases recorded in Table 7 of the *1996 and 1997 Statistical Presentations* were reported in error. The numbers of cases at the end of those years would not have reflected the numbers of inmates admitted and released in those years.

Cases in Table 8 represent inmates incarcerated with a life, death, or SDP sentence at the end of December 1994 through 2003. Sentences imposed both before and after determinate sentencing are included. The number of each will not total the previous year's total plus admissions for that year because of vacated sentences, remanded sentences, deaths, or releases. Projected time to be served could not be calculated because some cases will never be released (death and life without parole sentences) or release dates are unknown (SDP and life with parole).

Figure 10 focuses on the volume of child sex offenders in the prison population. The Habitual Child Sex Offender Registration Act became effective on August 15, 1986. This Act stipulated that a person could be certified as a child sex offender only upon his or her second or subsequent conviction of a sex crime against a victim under the age of 18. Effective January 1, 1993, the Child Sex Offender Registration Act (730 ILCS 150) required that these offenders be designated as a Child Sex Offender (CSO) on the first offense. This would result in more CSO sentences to prison. However, when the law was initially put into effect, many offenders were mislabeled as CSOs due to a lack of reliable victim information. Since 1995, the States Attorneys have been providing much better information and the Record Office staff are identifying only those inmates who meet the criteria under the Child Sex Offender Registration Act.

These statutes are now referred to as the Sex Offender Registration Act and the Child Sex Offender and Child Murderer Community Notification Law. Any person convicted of a felony

sex crime or an attempt to commit a felony sex crime is now required to register as a sex offender regardless of the victim's age. Effective June 1, 1996 and with subsequent amendments, additional registrable offenses have been added. Refer to the Illinois Compiled Statutes, 730 ILCS 150 and 730 ILCS 152, for details of these laws.

Table 9 lists Truth in Sentencing offenses as they are represented in the end-of-year prison population. A description of the Truth in Sentencing statute is provided earlier in this appendix.

Part II

Length of Stay

In the length of stay tables, a case is a record of the cumulative time an inmate spent in prison, jail, and other holding facilities. In situations where an offender served time for more than one offense, the length of stay data represent the holding offense (described above). All types of exits from prison, including release to parole or Mandatory Supervised Released (MSR), expiration of sentence, death, court-ordered discharge, reversed sentences, and reversed and remanded sentences, are reported. Release data of SDP cases also are included.

Length of stay data represent two time periods. Time Served is comprised of time spent in jail, mental health custody, juvenile facilities, custody in another state or federal jurisdiction, on probation, or on periodic imprisonment for which the offender received credit on the sentence, plus time in prison. Prison Stay refers only to time spent in IDOC adult facilities. The data are disaggregated by three categories: total cases, determinate cases, and indeterminate cases. For offenders released to parole or MSR who are revoked and returned to prison, the additional time spent completing the original sentence is not included in the length of stay calculations.

Length of stay data are determined from inmates who are released from prison. It is important to understand that a majority of the released inmates had served time for the lower offense classes, and actual length of stay figures for inmates released for Murder and Class X sentences most often will represent those offenders with the shorter sentences. The relatively few released inmates who served long periods of time would have a minimal impact on the average lengths of stay presented in this report. Therefore, length of stay data may understate the anticipated time served for all inmates sentenced to prison. The average sentence length from admissions can be used to calculate projected length of stay; this will provide a more accurate estimate of the time newly admitted inmates would serve in prison.

Some unusual minimum and maximum lengths of stay may be noted in Tables 10 to 16. These cases were identified and records were examined to find the causes. For example, some short lengths of stay were for inmates who died in the institution or had their sentences reversed. Short minimum prison stays occurred most often for inmates who served a large percentage of their sentence in jail due to court continuances or illness. Large differences between time served and prison stay can be attributed to credit for time served on probation, in a mental health center, juvenile facility, Treatment Alternatives for Safe Communities (TASC) or other community drug program, or prison in another state. Some long lengths of stay resulted from inmates who were released on bond or writ and were not cleared until the year of exit, who received a consecutive

term for a crime committed in prison (escape, drug possession, aggravated battery) and had to serve extra time, or who received extensive good time revocations. All of these situations were rare and legitimate, and were included to be consistent with previous years.

Beginning with the *2002 Statistical Presentation*, Table 15 has been expanded to include all offenses with more than 300 exits in 2002. The following offenses were added: Aggravated Criminal Sexual Abuse (Class 2), and the Class 4 offenses of Domestic Battery, Driving while under the Influence of Alcohol or other Drugs during a period in which Driving Privileges were Revoked or Suspended, Obstructing Justice, and Prostitution. These data had been included in the Other Class 2 and Other Class 4 categories in previous *Statistical Presentations*.

The numbers of exits for Driving while under the Influence/Driving with a Revoked or Suspended License and Other Class 4 offenses reported in Table 15 of earlier *Statistical Presentations* had been reported in error. The numbers of exits and length of stay data from 1994 to 2001 for these two offense categories were corrected and reported in the *2003 Statistical Presentation*.

In the *2003 Statistical Presentation*, specific Class 1 or lower offenses that were previously listed in Table 16 for indeterminate sentences have been collapsed into each offense class category. This was conducted due to the minimal number of indeterminate releases in recent years. Refer to prior *Statistical Presentations* for length of stay data for these specific offenses.

Table 17 lists the lengths of stay for the holding offenses used most frequently for inmates released during 2003. All sentences, including those outside of the sentencing ranges, are included.

The influence of the Impact Incarceration Program on length of stay is presented in Table 18. The effect of the program on length of stay for inmates released in 2003, as compared to a group of inmates who met IIP criteria but were not selected to participate, is discussed.

The *2003 Statistical Presentation* contains updated recidivism data. Recidivism is defined as a return to prison of inmates released in fiscal year 2000 for a new offense or a technical violation within three years of their release. Recidivism data are offered only as a method to determine how many released offenders return to prison. No causal inferences or other statistical interpretations should be implied from the data.

Part III

Sentences Imposed and Admissions

In Part III, a case represents a felony sentence imposed for a period of incarceration within IDOC. Thus, except for prison admission data, the number of sentences imposed, not the number of offenders, is being reported. The cases categorized by year are based on the dates offenders are sentenced to IDOC, not necessarily the dates they are received by IDOC. The average sentence represents reported cases within each offense category for that year excluding life, death, and SDP sentences.

For prison admissions, in situations where an offender was sentenced for more than one offense, the data represent the holding offense (described above). The admissions categorized by year are based on the dates offenders are received by IDOC, which may not be the year in which the inmate was sentenced.

The number of life, death, SDP, and indeterminate sentences imposed each year from 1994 through 2003 are available in Table 20. Note that these data represent the number of sentences, not the number of inmates sentenced. Unclassified cases are included as determinate cases in Table 20, but are not reported in other tables that are disaggregated by offense and class.

Some Class 4 sentences may be less than six months and would not be reported in Table 21. Total cases may not sum to the totals reported in Table 20.

Data reported in Tables 22, 23, and 24 do not reflect sentences that fall outside of the range specified for each class (Chapter 730 ILCS 5/5-8-1). Judges may impose a sentence up to twice the maximum range (Chapter 730 ILCS 5/5-8-2) for cases that reflect factors in aggravation (Chapter 730 ILCS 5/5-5-3.2) or may minimize a sentence of imprisonment for cases with mitigating circumstances (Chapter 730 ILCS 5/5-5-3.1). Interpretation of sentence data for cases less than the minimum must take into account that, if the court does not specify the class of crime for drug offenses, the highest class of crime is entered until the courts clarify the information. Compare the data in Table 20 to study the differences in sentence lengths when shortened and extended sentences are calculated.

Sentences for inmates incarcerated for their third Class 2 or higher offense were listed in the Other Class X category in *Statistical Presentations* published before 1995. Following the People v. Jameson court decision (described previously), applicable cases sentenced between 1995 and 2003 were recorded in the appropriate Other Class 1 or Other Class 2 categories. There will be sizeable reductions in the number of Class X sentences with corresponding increases in Class 1 and Class 2 offenses from data reported in reports published before 1995 (refer to Tables 22, 24, 26, 27, and 30).

Some Murder sentences listed from 1987 to 1994 in Tables 22 and 24 may have occurred after 1987 (described previously), but were entered into OTS as "Murder before 1987." Any murder committed after July 1, 1987 should be categorized as First Degree Murder. The data entry problem was discovered during 1995 and subsequent cases were corrected. However, cases could not be corrected in the data files before 1995.

Beginning with the *2002 Statistical Presentation*, Table 24 has been expanded to include all offenses with more than 300 sentences imposed in 2002. The following offenses were added: Predatory Criminal Sexual Assault of a Child (Class X), Aggravated Robbery and Possession of a Controlled Substance (Class 1), Aggravated Unlawful Use of a Weapon/Aggravated Unlawful Use of a Weapon by a Felon (Class 2), and Domestic Battery, Prostitution and Violation of the Sex Offender Registration Act (Class 4). These data had been included in the Other Class X, Other Class 1, Other Class 2, and Other Class 4 categories in previous *Statistical Presentations*.

Table 26 compares indeterminate and determinate sentences imposed. Data have been accumulated from 1978 through 2003, and are disaggregated by offense class. Table 27 summarizes determinate sentences imposed from 1994 to 2003 by offense class, including those cases that fall into the sentencing range, sentences less than the minimum and extended sentences. Table 28 and Table 29 list the specific offenses for 2003 sentences imposed and admissions that were less than the minimum and greater than the maximum. A case is counted as an admission only if the listed offense was the holding offense. Tables 27 to 29 do not include unclassified cases.

Court admissions to IDOC with consecutive sentences imposed from 1994 through 2003 are presented by offense class in Table 30. Average sentence lengths for consecutive sentences are calculated using two methods to demonstrate the impact of these accumulated sentences. First, the mean and standard deviation for the holding offense are calculated. Second, the total time of all consecutive sentences was computed. For example, an inmate who receives a 30-year First Degree Murder sentence and a consecutive 20-year sentence for Aggravated Kidnapping would only have the Murder sentence as part of the data for the "Holding Offense Only" columns, but would have a 50-year accumulated sentence under the columns labeled "All Sentences." The latter situation represents the true sentence length (730 ILCS 5/5-8-4), and the holding offense averages are included to conform to data reported in other tables throughout this document.

During 1995 a change was made in the process in which consecutive sentences are calculated using the holding sentence in OTS. The consecutive sentence data in Table 30 should not be used to estimate trends or make any other inferences without further input from IDOC.

Tables 31 and 32 describe drug offenses including violations of the Controlled Substances Act and Cannabis Control Act, as well as sentences for Driving while under the Influence of Alcohol or other Drugs. All sentences within and outside of statutory ranges are included. In Table 32, only court admissions for holding drug offenses are included.

Table 33 lists the offenses for which sentences have been imposed most often during 2003. All sentences, including those outside of the sentencing ranges, are included. Table 33 also lists the number of court admissions for crimes that were the holding offense. The difference between sentences and admissions for each offense represents cases where sentences were imposed but were in conjunction with another sentence that was the holding offense. The sentences would be served concurrently and would have an equal or shorter sentence for an equal or lower class of crime, or they would be served consecutively.

Table 34 provides information regarding Truth in Sentencing admissions during 2003 only. As more data become available due to verification of mittimi for Truth in Sentencing cases, these numbers may change. Life, death, and Sexually Dangerous Person (SDP) cases are excluded from the length of stay calculations in Table 34.

In Tables 36 to 70, data for the most commonly imposed determinate sentences of 2003 are provided by judicial circuit and district, and by geographic region. Only those sentences that fall into the range established by statute are reported. The purpose of these tables is to aid judges and other court administrators when they analyze sentencing patterns within their jurisdictions. These

tables should be interpreted as comparisons among circuits and districts of average sentence lengths and the number of sentences imposed in relation to other jurisdictions within Illinois. Attention should also be given to the number of sentences imposed when making comparisons; descriptive statistics can be misleading when calculated from a small number of cases. A list (Table 35) and maps (Figure 24 and Figure 25) of circuits and districts by county precede the tables.

Admission data are reported in Tables 71 to 73. Throughout most of the previous tables in Part III, a case has represented a sentence that was imposed by the court. When an offender is sentenced to IDOC for more than one offense, sentence data are reported for the holding offense. When examining admission data, only one sentence, which is associated with the holding offense, is reported.

Table 71 reports all admissions to IDOC. All court admissions, including those with sentences within and outside of the statutory sentencing ranges as well as those with a life or death sentence and a Sexually Dangerous Person commitment, are reported. Court admissions include adults admitted to IDOC from criminal court for the first time, adults on MSR or parole who receive a new felony sentence, adults who have been discharged from MSR or parole and receive a new felony sentence, and juvenile felons or court commitments who are transferred from the Juvenile Division to the Adult Division due to their age. Other inmates are sentenced to life, i.e., natural life imprisonment (730 ILCS 5/5-8-1), to death (720 ILCS 5/9-1) or as a Sexually Dangerous Person (SDP) (725 ILCS 205/8). Technical violations include adults readmitted due to a rule violation of the Parole or Mandatory Supervised Release Agreement while on MSR or parole.

Tables 72 and 73 list court admission data by offense class and offense type, respectively. In some cases, there will be more admissions than sentences imposed (see Tables 22 and 23); data in Tables 72 and 73 include all court admissions while sentence imposed data reflect only sentences within the statutory ranges. Court admissions that do not have offense data in OTS and unclassified cases are excluded from Tables 72 and 73.
