

## ILLINOIS RACING BOARD

June 9, 2015

### REVISED

TO: All Illinois Licensed Trainers & Veterinarians  
FROM: Domenic DiCera, Interim Executive Director

The Illinois Racing Board is in the final stages of amending the medication rules to include the regulation of 22 additional therapeutic medications with threshold levels. They are Acepromazine, Albuterol, Betamethasone, Butorphanol, Clenbuterol, Dantrolene, Detomidine, Dexamethasone, Diclofenac, DMSO, Firocoxib, Glycopyrrolate, Isoflupredone, Lidocaine, Mepivacaine, Methocarbamol, Methylprednisolone, Omeprazole, Prednisolone, Procaine Penicillin, Triamcinolone Acetonide, and Xylazine. The threshold levels and withdrawal guidelines were recommended by the Racing Medication and Testing Consortium and adopted by the Association of Racing Commissioners International.

The IRB currently regulates furosemide, flunixin, ketoprofen, and phenylbutazone. If a laboratory finding in your horse following a race indicates the presence of any of the therapeutic medications at a concentration that exceeds the threshold, you will be in violation of the IRB medication rules. The IRB anticipates that the amended medication rules will become effective July 1, 2015.

The Board's laboratory is phasing out ELISA screening and begun instrumental screening. Instrumental screening (GC-MS or LC-MS instrumentation) offers increased sensitivity by lowering limits of detection, as compared to ELISA.

The IRB recognizes that the use of corticosteroids in racehorses is controversial. However, when used responsibly, the medications can be beneficial. Accordingly, the IRB will implement a grace period to allow veterinarians time to adjust their veterinary practices and to allow trainers time to adjust their training practices. The trainer and owner shall be notified if there is a corticosteroid overage, during the grace period, which ends on July 31, 2015.

### Corticosteroid

Betamethasone  
Dexamethasone

Isoflupredone  
Methylprednisolone

Prednisolone

Triamcinolone Acetonide

### Recommended Withdrawal Guideline

7 days

72 hours

7 days

21 days at a 100 milligram dose

48 hours

7 days

Visit the IRB's website for the **RCI Controlled Therapeutic Medication Schedule**.
