

ILHIE and Stage 2 Meaningful Use

Presented by

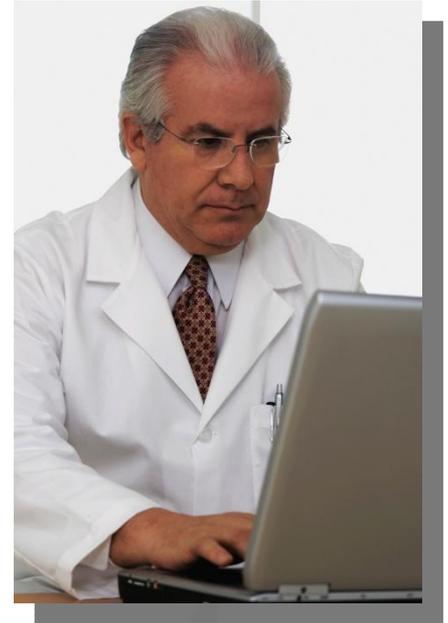

Raul Recarey, Executive Director of the ILHIE Authority

Ivan Handler, Chief Technology Officer

What is Meaningful Use?

- **The goal of meaningful use:**
 - Promote the spread of electronic health records to improve health care
 - A set of standards that governs the use of electronic health records (EHR's)
 - Allows eligible professionals/hospitals to earn Medicare and Medicaid incentive payments by meeting specific criteria.

ILHIE and Stage 2 Meaningful Use

Connecting to the Illinois Health Information Exchange (ILHIE) Helps Providers Achieve Stage 2 meaningful use

Connecting to the ILHIE

- Some meaningful use objectives are attained through an EHR and others through an HIE
- Stage 2 meaningful use criteria have a clear focus on health information exchange (HIE) to provide better patient care
- Other core objectives are achieved through your electronic health records system (EHR)

Example of Two Core Objectives Achieved Through Your EHR

- **Core Measure 7 (Eligible Hospitals)**
 - Protect electronic health information created or maintained by the Certified EHR Technology
- **Core Measure 8 (Eligible Hospitals)**
 - Incorporate clinical lab-test results into Certified EHR Technology

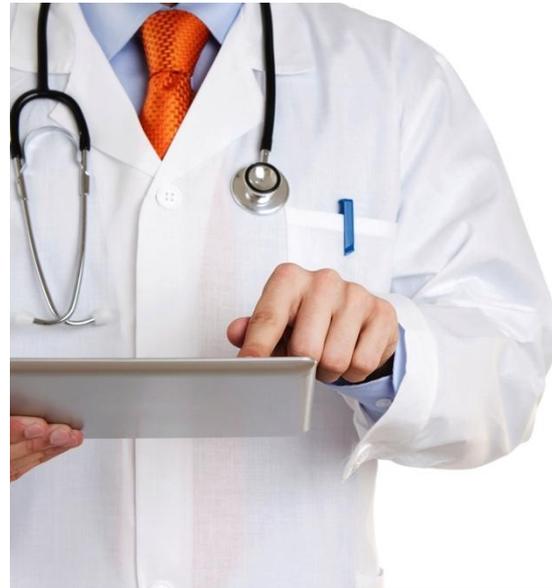

Stage 3 Meaningful Use (2016)

- Stage 3 meaningful use criteria is heavily focused on health information exchange (HIE)
- Connect to the ILHIE now and be well prepared!

Core Objectives Eligible Professionals

Let's review the
Stage 2 meaningful use
Core Objectives that the
ILHIE will assist
Eligible Professionals
to achieve

Patient Communication About Relevant Health Information #8

MU Objective:

- Use secure electronic messaging to communicate with patients on relevant health information

ILHIE Solution:

- ILHIE Direct allows providers to communicate relevant health information to patients using the “Out of Network” feature

Protect Health Information #9

MU Objective:

- Protect electronic health information created or maintained by the certified EHR technology through the implementation of appropriate technical capabilities

ILHIE Solution:

- Provides a secure means of transporting protected health information (PHI) from one provider to another

Clinical Lab Test Results #10

MU Objective:

- Incorporate clinical lab results into Certified EHR Technology

ILHIE Solution:

- ILHIE Direct can be used to present structured clinical lab results as an attachment to an ILHIE Direct message

Medication Reconciliation #14

MU objective:

- The Eligible Provider (EP) who receives a patient from another setting of care or provider of care or believes an encounter is relevant should perform medication reconciliation

ILHIE Solutions:

- For providers connected to the ILHIE, the Eligible Provider (EP) receiving a patient from another care setting can perform a patient query for a medication history
- Or receive a medication history via ILHIE DIRECT, and then perform the reconciliation

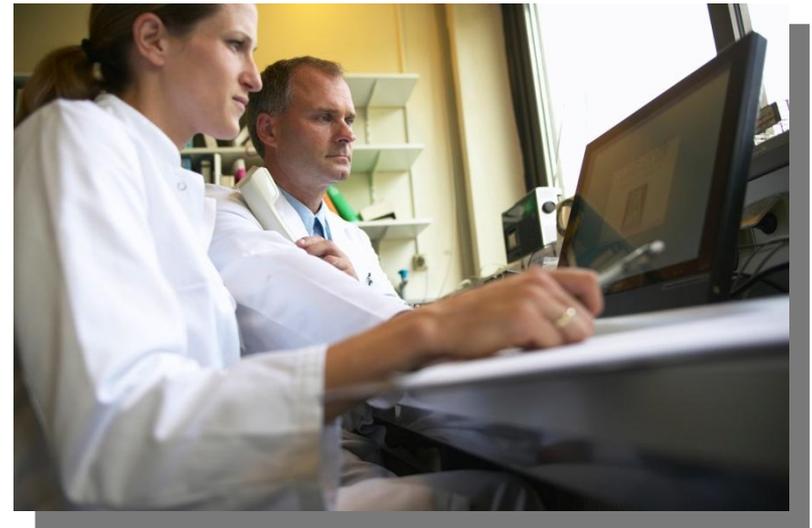

Summary of Care Record #15

MU Objective:

- Provide a summary of care for each transition of care or referral

ILHIE Solution:

- ILHIE provides the capability to transmit the summary of care record from one provider to another

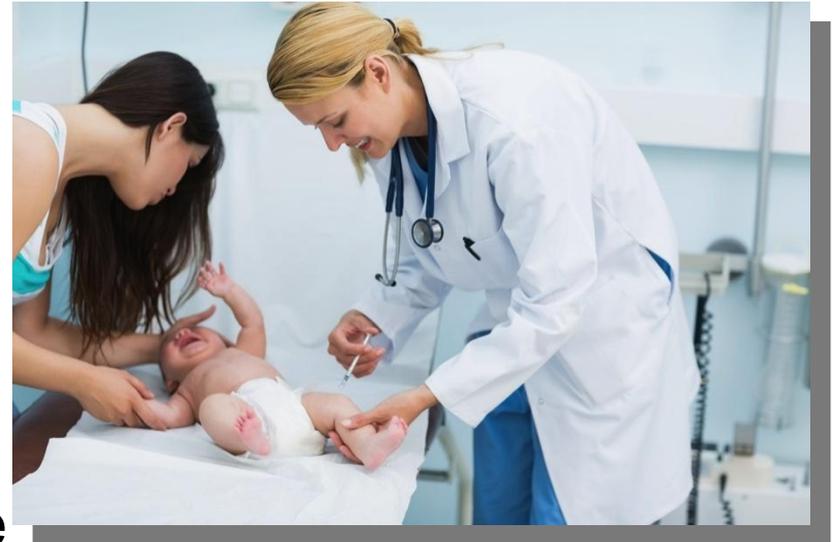

MU Objective:

- Submit electronic data to immunization registries

ILHIE Solution:

- Connecting to the ILHIE provides connectivity to the Public Health Node, allowing professionals to report immunization data

Report on 3 of 6 Menu Objectives Cancer Registry #5

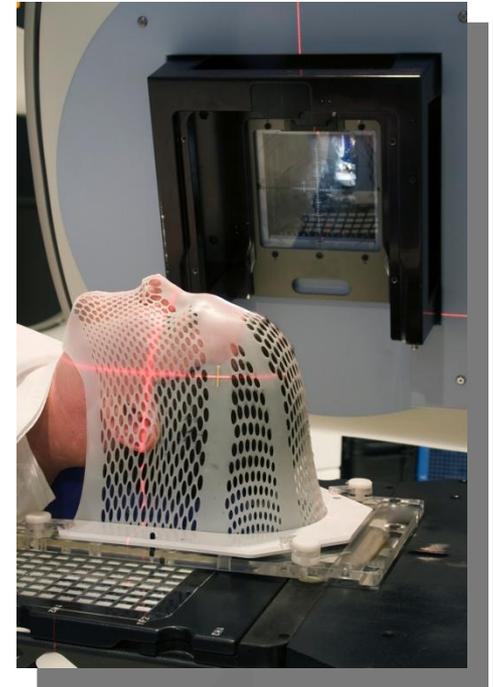

MU Objective:

- Identify and report cancer cases to a state cancer registry

ILHIE Solution:

- ILHIE provides connectivity to the Public Health Node which will connect to the State Cancer registry

Report on 3 of 6 Menu Objectives Specialized Registry #6

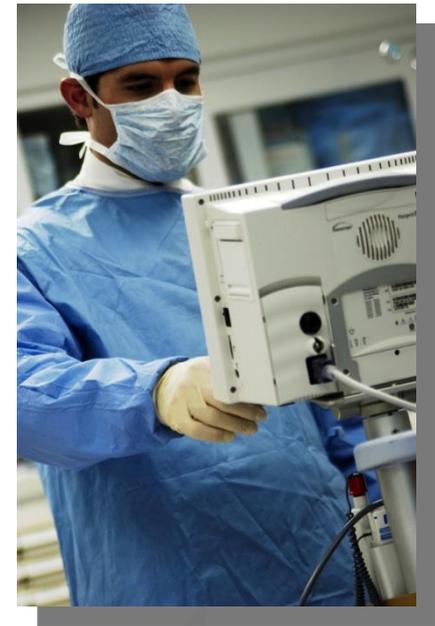

MU objective:

- Identify and report specific cases to a specialized registry (other than a cancer registry)

ILHIE Solution:

- ILHIE provides connectivity to the Public Health Node which will connect to any specialized registries as they become established

Core Objectives Eligible Hospitals

Let's review the
Stage 2 meaningful use
Core Objectives that the
ILHIE will assist
Eligible Hospitals
to achieve

Protect Health Information #7

MU Objective:

- Protect electronic health information created or maintained by the certified EHR technology through the implementation of appropriate technical capabilities

ILHIE Solution:

- ILHIE provides a secure encrypted means of transporting protected health information (PHI) from one provider to another

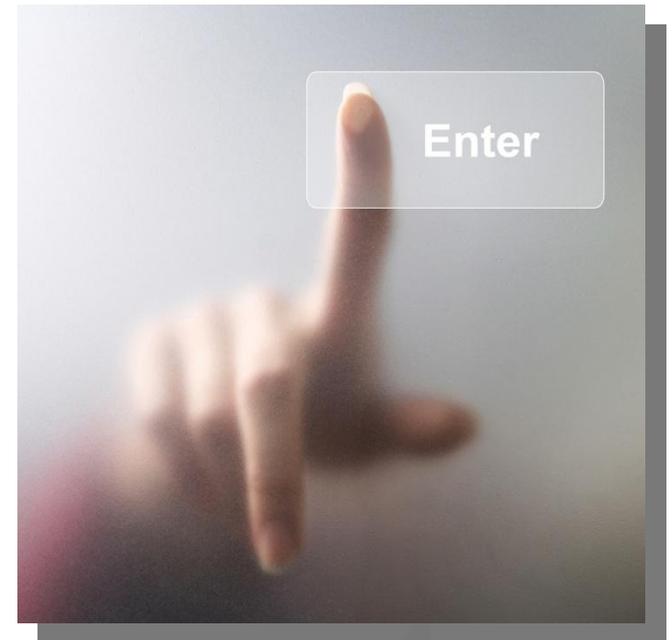

Summary of Care Record #12

MU Objective:

- Provide a summary of care for each transition of care or referral

ILHIE Solution:

- ILHIE provides the capability to transmit the summary of care record from one provider to another

MU Objective:

- Submit electronic data to immunization registries

ILHIE Solution:

- Connecting to the ILHIE provides connectivity to the Public Health Node, allowing hospitals to report immunization data

Reportable Lab Results #14

MU Objective:

- Submit electronic data on reportable lab results to public health agencies

ILHIE Solution:

- ILHIE provides connectivity to the Public Health Node, allowing hospitals to submit reportable lab results to Public Health

Syndromic Surveillance #15

MU Objective:

- Submit electronic syndromic surveillance data to public health agencies

ILHIE Solution:

- ILHIE provides connectivity to the Public Health Node, allowing hospitals to report syndromic surveillance data

Report on 3 of 6 Menu Objectives Advanced Directives #1

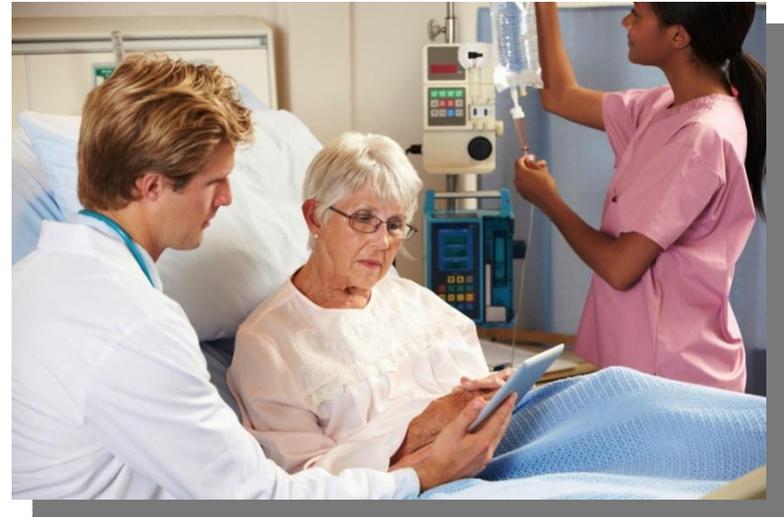

MU Objective:

- Record whether a patient is 65 years or older and has an advanced directive

ILHIE Solution:

- The ILHIE, in conjunction with the Illinois Department of Public Health, is contemplating the development of an Advanced Directives Repository which, once established, will enable the collection of Advanced Directives information obtained from patients by hospitals.

Report on 3 of 6 Menu Objectives Structured Electronic Lab Results #6

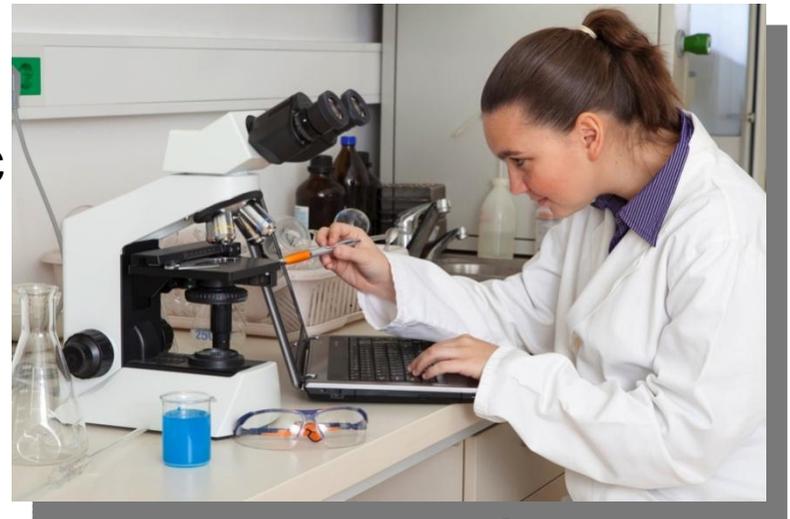

MU Objective:

- Provide structured electronic lab results to ambulatory providers

ILHIE Solution:

- ILHIE Direct can be used to present structured clinical lab results as an attachment to an ILHIE Direct message and sent to ambulatory provider

- The U.S. Department of Health and Human Services released the complete list of final rules for Stage 2 meaningful use and updated certification criteria and standards.
- Learn more about the final rules and read about meaningful use clinical quality measures.
